

Operator E LTE CA (Carrier Aggregation) Feature Test Guide

1 Feature Introduction

3GPP requires that LTE-Advanced networks provide a downlink peak data rate of 1 Gbit/s. However, due to the limited bandwidth of a single carrier, the 1 Gbit/s data rate requirement is hard to meet. To deal with this situation, 3GPP Release 10 introduced carrier aggregation (CA) for LTE-Advanced networks. CA allows aggregation of contiguous or non-contiguous component carriers (CCs) to expand bandwidth to up to 100 MHz.

Related Concept:

PCell

A primary serving cell (PCell) is a cell on which a CA UE camps. In the PCell, the CA UE works in the same way as it does in a 3GPP Release 8 or Release 9 cell. The physical uplink control channel (PUCCH) of the UE exists only in the PCell.

SCell

A secondary serving cell (SCell) is a cell that an eNodeB configures for a CA UE through an RRC Connection Reconfiguration message. This cell works at a different frequency than the PCell and provides the CA UE with more radio resources. In an SCell, there can be only downlink transmission or both downlink and uplink transmission.

CC

Component carriers (CCs) are the carriers that are aggregated for a CA UE.

PCC

The primary component carrier (PCC) is the carrier of the PCell.

SCC

A secondary component carrier (SCC) is the carrier of an SCell.

3GPP defined CA Band combination (refer to 3GPP TR 36.101 section 5.5).

2 Operator E Test Situation

Three carriers are ready for test:

Comprehensive Sampling and Sample Preparation Josep M. Bayona,Paola Dugo,X. Chris Le,Hian Kee Lee,Xing-Fang Li,Heather Lord,2012-12-31 Comprehensive Sampling and Sample Preparation is a complete treatment of the theory and methodology of sampling in all physical phases and the theory of sample preparation for all major extraction techniques It is the perfect starting point for researchers and students to design and implement their experiments and support those experiments with quality reviewed background information In its four volumes fundamentals of sampling and sample preparation are reinforced through broad and detailed sections dealing with Biological and Medical Environmental and Forensic and Food and Beverage applications The contributions are organized to reflect the way in which analytical chemists approach a problem It is intended for a broad audience of analytical chemists both educators and practitioners of the art and can assist in the preparation of courses as well in the selection of sampling and sample preparation techniques to address the challenges at hand Above all it is designed to be helpful in learning more about these topics as well as to encourage an interest in sampling and sample preparation by outlining the present practice of the technology and by indicating research opportunities Sampling and Sample preparation is a large and well defined field in Analytical Chemistry relevant for many application areas such as medicine environmental science biochemistry pharmacology geology and food science This work covers all these aspects and will be extremely useful to researchers and students who can use it as a starting point to design and implement their experiments and for quality reviewed background information There are limited resources that Educators can use to effectively teach the fundamental aspects of modern sample preparation technology Comprehensive Sampling and Sample Preparation addresses this need but focuses on the common principles of new developments in extraction technologies rather than the differences between techniques thus facilitating a more thorough understanding Provides a complete overview of the field Not only will help to save time it will also help to make correct assessments and avoid costly mistakes in sampling in the process Sample and sample preparation are integral parts of the analytical process but are often less considered and sometimes even completely disregarded in the available literature To fill this gap leading scientists have contributed 130 chapters organized in 4 volumes covering all modern aspects of sampling and liquid solid phase and membrane extractions as well as the challenges associated with different types of matrices in relevant application areas *Guidelines for the prevention of bloodstream infections and other infections associated with the use of intravascular catheters. associated with peripherally inserted IV catheters while a subsequent WHO guideline Part 2 to be developed in 2024 will cover centrally inserted intravascular catheters In particular Part 1 of the Guidelines outlines an evidence informed approach to the management namely insertion maintenance access and removal of peripherally inserted intravascular catheters including PIVCs PICCs and PACs in three patient populations adults adolescents children and neonates during the provision of health care in any health care settings including acute and long term health care facilities and primary care settings The intended audience for these guidelines is clinicians that is doctors nurses IPC professionals etc involved in the management of patients who require intravascular catheters However to ensure an appropriate practical clinical adherence to the guidelines hospital administrators and other professionals involved in health care need to understand their importance and the focus of the recommendations to ensure appropriate support for clinicians Patients are also part of the audience of these guidelines as they need to be generally informed about practices performed for their care and in some cases understand the choice of the intervention s *Flying Magazine* ,1948-08 **Nuclear Safety** ,1965 **NBS Special Publication** ,1971
