International Dispute Resolution Dennis Campbell,2010-01-01 This special issue of the Comparative Law Yearbook of International Business examines a variety of issues relating to international dispute resolution National systems such as Brazil England and Wales Hong Kong India Italy Slovakia the United States are reviewed The treatment of special issues ranges from document production discovery and ethics to public policy telecommunications contracts and expatriate employees Finally the issue surveys various topics dealing with matters such as the general principles of law international rules international contract law consolidation and class actions and enforcement of arbitral awards *Scientific and Technical Aerospace Reports* ,1988 **National Guide to Funding in Aging** ,1989 *Protecting the Last Frontier* Gabrielle Leterre,2024-04-29 *Aerospace Law and Policy Series* Space resource activities better known as space mining is the next step in humankind s utilization of outer space Previous space activities have belatedly caused us to realize that fragile environments do not end with Earth s atmosphere Today the most striking problem is the agglomeration and increasing generation of nonfunctional space objects space debris in orbit Tomorrow with the development of new space activities

unanticipated environmental problems will arise beyond Earth orbit This book seeks to anticipate the inevitable legal framework that will need to be put in place and in particular considers the necessity to create legal standards to support the environmental sustainability of space resource activities To that end the book assesses the efficiency of existing space law in addressing environmental threats and reflects on the potential contribution international environmental law can offer The array of applicable mechanisms considered includes a detailed examination of the following what kind of environmental problems may arise from space resource activities which norms of international law are relevant in addressing these threats within the framework of sustainability the United Nations Space Treaties domestic space legislations that directly address space resource activities or that are particularly significant from an environmental perspective and soft law especially instruments and guidelines from international organizations acting in the space sector such as the United Nations Committee on the Peaceful Uses of Outer Space COPUOS and the Committee on Space Research COSPAR Contrary to a common idea space resources such as the ones found in situ on celestial bodies are limited and need to be managed rationally It is indubitable that activities beyond Earth orbit will have an impact on the surrounding environment raising a host of potential issues which go beyond the question of debris such as contamination and the risk of overexploitation Ultimately this book drafts the roadmap for the environmentally sustainable exploitation of space resources from a legal standpoint and proposes a sustainability framework articulated around a set of standards Concerned lawyers and policymakers worldwide will greatly appreciate the book's set of objective standards and concrete measures This practical approach which includes the comprehensive review of instruments governing space activities will lead them to navigate with assurance the different normative levels of legal action for astro environmentalism
