

Photosynthesis

The steps

1 Light Absorption

Plant leaves contain a pigment called chlorophyll, which absorbs sunlight.

2 CO₂ Uptake

Carbon dioxide is taken in by plants through tiny openings on leaves called stomata.

3 Water Uptake

Plants absorb water from the soil through their roots and transport it to the leaves.

4 The Reaction

Photosynthesis occurs in chloroplasts, where sunlight energy is used to transform water and carbon dioxide into glucose and oxygen.

5 Glucose Production and Oxygen Release

Photosynthesis produces glucose, which is the primary source of energy for plants, and releases oxygen as a byproduct through stomata into the air.
