Quantitative analysis of neuroanatomy Julian M L Budd, Hermann Cuntz, Stephen J Eglen, Patrik Krieger, 2016-03-22 The true revolution in the age of digital neuroanatomy is the ability to extensively quantify anatomical structures and thus investigate structure function relationships in great detail Large scale projects were recently launched with the aim of providing infrastructure for brain simulations These projects will increase the need for a precise understanding of brain structure e g through statistical analysis and models From articles in this Research Topic we identify three main themes that clearly illustrate how new quantitative approaches are helping advance our understanding of neural structure and function First new approaches to reconstruct neurons and circuits from empirical data are aiding neuroanatomical mapping Second methods are introduced to improve understanding of the underlying principles of organization Third by combining existing knowledge from lower levels of organization models can be used to make testable predictions about a higher level organization where knowledge is absent or poor This latter approach is useful for examining statistical properties of specific network connectivity when current experimental methods have not yet been able to fully reconstruct whole circuits of more than a few hundred neurons

Machine Learning Techniques Applied to Geoscience Information System and Remote Sensing Hyung-Sup Jung, Saro Lee, 2019-09-03 As computer and space technologies have been developed geoscience information systems GIS and remote sensing RS technologies which deal with the geospatial information have been rapidly maturing Moreover over the last few decades machine learning techniques including artificial neural network ANN deep learning decision tree and support vector machine SVM have been successfully applied to geospatial science and engineering research fields The machine learning techniques have been widely applied to GIS and RS research fields and have recently produced valuable results in the areas of geoscience environment natural hazards and natural resources This book is a collection representing novel contributions detailing machine learning techniques as applied to geoscience information systems and remote sensing

Emerging Technology in Modelling and Graphics Jyotsna Kumar Mandal, Debika Bhattacharya, 2019-07-16 The book covers cutting edge and advanced research in modelling and graphics Gathering high quality papers presented at the First International Conference on Emerging Technology in Modelling and Graphics held from 6 to 8 September 2018 in Kolkata India it addresses topics including image processing and analysis image segmentation digital geometry for computer imaging image and security biometrics video processing medical imaging and virtual and augmented reality

Multiscale, Nonlinear and Adaptive Approximation II Ronald DeVore, Angela Kunoth, 2024-12-03 This book presents a collection of high quality papers in applied and numerical mathematics as well as approximation theory all closely related to Wolfgang Dahmen's scientific contributions Compiled in honor of his 75th birthday the papers are written by leading experts and cover topics including nonlinear approximation theory numerical analysis of partial differential equations learning theory and electron microscopy A unifying theme throughout the collection is the emphasis on a solid mathematical foundation which serves as the basis for the most efficient numerical algorithms used to simulate complex phenomena

Mathematics for Machine Learning Marc Peter Deisenroth, A. Aldo Faisal, Cheng Soon Ong, 2020-04-23 The fundamental mathematical tools needed to understand machine learning include linear algebra analytic geometry matrix decompositions vector calculus optimization probability and statistics These topics are traditionally taught in disparate courses making it hard for data science or computer science students or professionals to efficiently learn the mathematics This self contained textbook bridges the gap between mathematical and machine learning texts introducing the mathematical

concepts with a minimum of prerequisites It uses these concepts to derive four central machine learning methods linear regression principal component analysis Gaussian mixture models and support vector machines For students and others with a mathematical background these derivations provide a starting point to machine learning texts For those learning the mathematics for the first time the methods help build intuition and practical experience with applying mathematical concepts Every chapter includes worked examples and exercises to test understanding Programming tutorials are offered on the book's web site

Advanced Machine Learning Technologies and Applications Aboul Ella Hassanien, Mohamed Tolba, Ahmad Taher Azar, 2014-11-04 This book constitutes the refereed proceedings of the Second International Conference on Advanced Machine Learning Technologies and Applications AMLTA 2014 held in Cairo Egypt in November 2014 The 49 full papers presented were carefully reviewed and selected from 101 initial submissions The papers are organized in topical sections on machine learning in Arabic text recognition and assistive technology recommendation systems for cloud services machine learning in watermarking authentication and virtual machines features extraction and classification rough fuzzy sets and applications fuzzy multi criteria decision making Web based application and case based reasoning construction social networks and big data sets

Augmented Reality, Virtual Reality, and Computer Graphics Lucio Tommaso De Paolis, Patrick Bourdot, 2019-07-27 The 2 volume set LNCS 11613 and 11614 constitutes the refereed proceedings of the 6th International Conference on Augmented Reality Virtual Reality and Computer Graphics AVR 2019 held in Santa Maria al Bagno Italy in June 2019 The 32 full papers and 35 short papers presented were carefully reviewed and selected from numerous submissions The papers discuss key issues approaches ideas open problems innovative applications and trends in virtual and augmented reality 3D visualization and computer graphics in the areas of medicine cultural heritage arts education entertainment military and industrial applications They are organized in the following topical sections virtual reality medicine augmented reality cultural heritage education and industry
