

# PLACENTA PREVIA

WATCH VIDEO!

Placenta previa occurs when the placenta implants in the lower uterine segment, rather than the fundus. If the placenta covers the cervix, it blocks the birth canal and presents the risk of life-threatening bleeding when the cervix begins to dilate. Placenta previa is classified by the location of the placenta and the degree to which it covers the cervical os.

Low-lying placenta

Marginal placenta

Partial previa

Complete previa

## Risk factors

- Prior placenta previa
- Prior cesarean section
- Other prior uterine surgery

## Management

*Known previa, identified on early pregnancy ultrasound:*

- Evaluate for placenta accreta.
- Serial ultrasounds to monitor placental location
- If persistent previa: planned cesarean at 36 to 37 weeks
