Facilities Management Peter Barrett, David Baldry, 2009-02-18 Facilities management has been one of the fastest growing professional disciplines for some years both in terms of volume and diversity of commercial activity. However, a widely accepted and implemented body of knowledge is still lacking. This book contributes to that knowledge building by taking models and ideas from a wide range of sources and linking them to extensive case study material drawn from practising facilities managers. The text is divided into three parts. Current practice is illustrated with a second chapter looking at enhancing services. Key facilities management issues are considered: user needs evaluation, outsourcing, and computer based information systems. Extensive advice is provided on managing people through change and on decision making. The Second Edition features new material on user needs briefing and procurement strategy together with new public sector case studies. This high quality book provides a comprehensive approach to the range of issues and the combination of case studies with theoretical perspectives and research has a strong practical emphasis. Chartered Surveyor Monthly. A thorough and very well researched book as a student text, it is first class. Construction Manager. Monitoring Tools for Setting up the Hospital Project Ajay Garg, 2023-12-06 The hospital buildings are one of the most complex buildings projects to plan, design, build, and operate. Hospital project planning involves site selection, Detailed Project Report (DPR) preparation, feasibility studies, room planning, hospital building zoning, and construction. This book provides in-depth knowledge and synchronization of the operational policies, licensing services, equipment procurement, workforce recruitment, and establishing the set of Standard Operating Procedures (SOPs) before the start of hospital operations. This book helps enlighten site engineers and various in-charges to plan their hospital projects efficiently, completing all the jobs and activities well in time. This book narrates all the relevant issues and details about the hospital planning and construction activities in a tabular form and explains each activity extensively. Moreover, the tables provided in the book will also help the planners and executors assess the activity's progress and the person responsible for it. The key feature of the book is a very easily understandable English language that provides the best understanding to the students of Hospital Management.
