R U Ready For Some Calculus:

Now, Are You Ready To Learn Economics? Lyndon LaRouche, **Cartesian Currents in the Calculus of Variations II** Mariano Giaquinta, Guiseppe Modica, Jiri Soucek, 1998-08-19 This monograph in two volumes deals with non scalar variational problems arising in geometry as harmonic mappings between Riemannian manifolds and minimal graphs and in physics as stable equilibrium configurations in nonlinear elasticity or for liquid crystals The presentation is selfcontained and accessible to non specialists Topics are treated as far as possible in an elementary way illustrating results with simple examples in principle chapters and even sections are readable independently of the general context so that parts can be easily used for graduate courses Open questions are often mentioned and the final section of each chapter discusses references to the literature and sometimes supplementary results Finally a detailed Table of Contents and an extensive Index are of help to consult this monograph

civilization and that it has since then been instrumental in every great leap of humankind Here are ancient Egyptian priests Babylonian bureaucrats medieval architects dueling Swiss brothers renaissance painters and an eccentric professor who invented the infrastructure of the online world Their stories clearly demonstrate that the invention of mathematics was every bit as important to the human species as was the discovery of fire From first page to last The Art of More brings mathematics back into the heart of what it means to be human
