Infancy A glimpse at Developmental Mechanisms of Cognition which was held in Carry le Rouet France at the Vacancier La Calanque from June 29 to July 3 1992 For many years developmental researchers have been systematically exploring what is concealed by the blooming and buzzing confusion as William James described the infant's world Much research has been carried out on the mechanisms by which organisms recognize and relate to their conspecifics in particular with respect to language acquisition and face recognition Given this background it seems worthwhile to compare not only the conceptual advances made in these two domains but also the methodological difficulties faced in each of them In both domains there is evidence of sophisticated abilities right from birth Similarly researchers in these domains have focused on whether the mechanisms underlying these early competences are modality specific object specific or otherwise *Fleet Owner* ,1988
