Investigations Stuart A. Kauffman,2002-09-19 It may be that I have stumbled

upon an adequate description of life itself These modest yet profound words trumpet an imminent paradigm shift in scientific economic and technological thinking In the tradition of Schrödinger's classic *What Is Life* Kauffman's *Investigations* is a tour de force exploration of the very essence of life itself with conclusions that radically undermine the scientific approaches on which modern science rests the approaches of Newton Boltzman Bohr and Einstein Building on his pivotal ideas about order and evolution in complex life systems Kauffman finds that classical science does not take into account that physical systems such as people in a biosphere effect their dynamic environments in addition to being affected by them These systems act on their own behalf as autonomous agents but what defines them as such In other words what is life Kauffman supplies a novel answer that goes beyond traditional scientific thinking by defining and explaining autonomous agents and work in the contexts of thermodynamics and of information theory Much of *Investigations* unpacks the progressively surprising implications of his definition Significantly he sets the stages for a technological revolution in the coming decades Scientists and engineers may soon seek to create autonomous agents both organic and mechanical that can not only construct things and work but also reproduce themselves Kauffman also lays out a foundation for a new concept of organization and explores the requirements for the emergence of a general biology that will transcend terrestrial biology to seek laws governing biospheres anywhere in the cosmos Moreover he presents four candidate laws to explain how autonomous agents co create their biosphere and the startling idea of a co creating cosmos A showcase of Kauffman's most fundamental and significant ideas *Investigations* presents a new way of thinking about the fundamentals of general biology that will change the way we understand life itself on this planet and anywhere else in the cosmos *Journal of the National Cancer Institute* ,2005

Kelley,2022-04-19 A revelatory work of reporting on the men and women wrestling to harness and preserve America's most vital natural resource our rivers The Mississippi The Missouri The Ohio America's rivers are the very lifeblood of our country We need them for nourishing crops for cheap bulk transportation for hydroelectric power for fresh drinking water Rivers are also part of our mythology our collective soul they are Mark Twain Led Zeppelin and the Delta

Blues But as infrastructure across the nation fails and climate change pushes rivers and seas to new heights we've arrived at a critical moment in our battle to tame these often destructive forces of nature Tyler J Kelley spent two years traveling the heartland getting to know the men and women whose lives and livelihoods rely on these tenuously tamed streams On the Illinois Kentucky border we encounter Luther Helland master of the most important and most decrepit lock and dam in America This old dam at the end of the Ohio River was scheduled to be replaced in 1998 but twenty years and 3 billion later its replacement still isn't finished As the old dam crumbles and commerce grinds to a halt Helland and his team must risk their lives using steam powered equipment and sheer brawn to raise and lower the dam as often as ten times a year In Southeast Missouri we meet Twan Robinson who lives in the historically Black village of Pinhook As a super flood rises on the Mississippi she learns from her sister that the US Army Corps of Engineers is going to blow up the levee that stands between her home and the river With barely enough notice to evacuate her elderly mother and pack up a few of her own belongings Robinson escapes to safety only to begin a nightmarish years long battle to rebuild her lost community Atop a floodgate in central Louisiana we're beside Major General Richard Kaiser the man responsible for keeping North America's greatest river under control Kaiser stands above the spot where the Mississippi River wants to change course abandoning Baton Rouge and New Orleans and following the Atchafalaya River to the sea The daily flow of water from one river to the other is carefully regulated but something else is happening that may be out of Kaiser and the Corps control America's infrastructure is old and underfunded While our economy society and climate have changed our levees locks and dams have not Yet to fix what's wrong will require more than money It will require an act of imagination With meticulous research and insightful analysis Publishers Weekly Holding Back the River brings us into the lives of the Americans who grapple with our mighty rivers and through their stories suggests solutions to some of the century's greatest challenges The Perils of Perfection Joseph Vukov, 2023-05-20 Are you left dizzy by the vast array of new technologies Skeptical about the latest Silicon Valley craze being worth the hype yet wary of those who would throw these technologies to the curb Me too This book seeks to avoid landmines in our quest for perfection while offering strategies for evaluating both the possibilities and the limits of human enhancement Think of it as a guide for navigating the perils of perfection while embracing the fullness of human dignity

Genes, Brain, and Emotions Andrei C. Miu, Judith R. Homberg, Klaus-Peter Lesch, 2019 The study of emotions has rapidly expanded in recent decades incorporating interdisciplinary research on the genetic underpinnings and neural mechanisms of emotion This book offers a comprehensive account of this interdisciplinary field of research bridging psychology genetics and neuroscience *Cognitive Neuroscience of Language* David Kemmerer, 2022-09-27 Cognitive Neuroscience of Language provides an up to date wide ranging and pedagogically practical survey of the most important developments in this exciting field It guides students through all of the major areas of investigation beginning with the fundamental aspects of brain structure and function and then following with key topics such as classic and progressive aphasia syndromes speech

perception and production the meanings of object nouns action verbs and abstract words the formulation and comprehension of complex expressions including grammatically inflected words complete sentences and entire stories and several other domains of neurolinguistic research including reading and writing sign language and the bilingual brain Drawing heavily on prominent theoretical models the core chapters illustrate how such frameworks are supported and sometimes challenged by experiments employing diverse brain mapping techniques This edition has been thoroughly updated throughout and now includes a dedicated chapter on the neural substrates of bilingualism Chapters have been revised to reflect the most salient developments in the field and the book has undergone a thoughtful restructure to mirror course teaching While the study of language can be challenging the text has been written accessibly and requires no previous knowledge of either neuroscience or linguistics and includes definitions of technical terms and explanations of important principles from both disciplines along the way Accompanied by online resources for students and instructors it is an essential companion for graduate or upper level undergraduate students
