Identities of Algebras and their Representations I U riã Pitrimovich Razmyslov, 1994 During the past forty years a new trend in the theory of associative algebras Lie algebras and their representations has formed under the influence of mathematical logic and universal algebra namely the theory of varieties and identities of associative algebras Lie algebras and their representations The last twenty years have seen the creation of the method of 2 words and alpha functions which allowed a number of problems in the theory of groups rings Lie algebras and their representations to be solved in a unified way The possibilities of this method are far from exhausted This book sums up the applications of the method of 2 words and alpha functions in the theory of varieties and gives a systematic exposition of contemporary achievements in the theory of identities of algebras and their representations closely related to this method The aim is to make these topics accessible to a wider group of mathematicians

Berlin Heinrich Begehr, Helmut Koch, Jürg Kramer, Norbert Schappacher, Ernst-Jochen Thiele, 1998-07-21 This little book is conceived as a service to mathematicians attending the 1998 International Congress of Mathematicians in Berlin. It presents a comprehensive condensed overview of mathematical activity in Berlin from Leibniz almost to the present day without however including biographies of living mathematicians. Since many towering figures in mathematical history worked in Berlin most of the chapters of this book are concise biographies. These are held together by a few survey articles presenting the overall development of entire periods of scientific life at Berlin. Overlaps between various chapters and differences in style between the chapters were inevitable but sometimes this provided opportunities to show different aspects of a single historical event for instance the Kronecker-Weierstrass controversy. The book aims at readability rather than scholarly completeness. There are no footnotes only references to the individual bibliographies of each chapter. Still we do hope that the texts brought together here and written by the various authors for this volume constitute a solid introduction to the history of Berlin mathematics.

Computer Science -- Theory and Applications Dima Grigoriev, John Harrison, Edward A. Hirsch, 2006-04-27 This book constitutes the refereed proceedings of the First International Symposium on Computer Science in Russia CSR 2006. The 35 revised full theory papers and 29 revised application papers together with 3 invited talks address all major areas in computer science. The theory track deals with algorithms, protocols, data structures and more. The application part comprises programming and languages, computer architecture and hardware design among many more topics.

Typed Lambda Calculi and Applications Martin Hofmann, 2003-05-27 The refereed proceedings of the 6th International Conference on Typed Lambda Calculi and Applications TLCA 2003 held in Valencia, Spain in June 2003. The 21 revised full papers presented were carefully reviewed and selected from 40 submissions. The volume reports research results on all current aspects of typed lambda calculi ranging from theoretical and methodological issues to the application of proof assistants.
