Investment in the Future

- [illegible]

Abstract—The purpose of this study was to determine the effect of a 10-week training program on the heart rate (HR) and heart rate reserve (HRR) of sedentary middle-aged men. The subjects were randomly assigned to a control group (CG) and an exercise group (EG). The EG performed a 10-week training program consisting of 3 sessions per week of 30 min of aerobic exercise at 60% of their maximum heart rate. The CG did not exercise. The HR and HRR were measured at rest and during a 30-min submaximal exercise test at the beginning and at the end of the 10-week period. The EG showed a significant decrease in HR at rest and during exercise, and a significant increase in HRR at rest and during exercise, compared to the CG. The results suggest that a 10-week training program can improve the cardiovascular fitness of sedentary middle-aged men.

If you are submitting T-type awards, follow the instructions regarding set out by the original grantor. If the action only requires the (to be printed on file) and no new awards require the original set out and no new (to be printed on file).

23. When configuring a multi-mount AFS, set `mountmnt` to your Netatun path: `mountmnt=/usr/bin/netatun`
24. If you're using the `afs` multi-mount method, add `afs` to the `mountmnt` path. For example, if you're using the `afs` multi-mount method, set `mountmnt=/usr/bin/netatun-afs`. This is required after the purchase of this type of multi-mount AFS, as pointing out the group appears in `group 1`.
25. Do not include the `FS` of `mountmnt`, as `FS` is deprecated.
26. When configuring the `afs` multi-mount AFS, do not check the `afs` box in the `afs` Netatun Client.

When you install your T-Value One Connection, improper installation of all four screws (50 combinations for One Connection) will void the warranty. Please, before installing, refer to the correct installation instructions. Failure to maintain proper ventilation may result in a variety of problems with the product.

- When a producer's price for the output rises or falls, it must adjust its output level accordingly. For example, if the price of the output rises, the producer will increase its output level. This is because the producer's marginal revenue curve shifts up, and the producer will increase its output level until marginal revenue equals marginal cost.
