

Important information for the use of biodegradable oil

- Use only the biodegradable hydraulic fluids which have been tested and approved by Wacker Neuson GmbH. Always contact Wacker Neuson GmbH for the use of other products which have not been recommended. In addition, ask the oil supplier for a written declaration of guarantee. This guarantee is applicable to damage occurring on the hydraulic components, which can be proven to be due to the hydraulic fluid.
- Use only biodegradable oil of the same type for filling up. In order to avoid mixture standstills, a label providing clear information is located on the hydraulic oil can pasted to the filler (check) regarding the type of oil currently used!
The joint use of two different biodegradable oils can affect the quality of one of the oil types. Therefore, make sure the remaining amount of initial hydraulic fluid in the hydraulic system does not exceed 0.5 % when changing biodegradable oil (manufacturer's indications).
- Do not fill up with mineral oil – the content of mineral oil should not exceed 2 % in order to avoid burning problems and to ensure biological degradability.
- When running the machine with biodegradable oil, the same oil and filter replacement intervals are valid as for mineral oil – see [Chapter 5.14 Maintenance plan 2000](#) [www.wn.com](#) on page 5.17.
- Always have the condensation water in the hydraulic oil can drained by an authorized workshop before the cold season. The water content may not exceed 0.1 % by weight.
- The instructions in this *Operator's Manual* concerning environmental protection are also valid for the use of biodegradable oil.
- If additional hydraulic attachments are mounted or operated, use the same type of biodegradable oil for these attachments to avoid mixtures in the hydraulic system.

Subsequent change from mineral oil to biodegradable oil must be carried out by an authorized workshop or to your Wacker Neuson partner.

Checking hydraulic pressure lines
Specify safety instructions

Danger!

Caution when checking hydraulic lines, especially when searching for leaks. Hydraulic oil escaping under high pressure can penetrate the skin and cause serious injuries.

Danger of personal injury!

- Always consult a doctor immediately, even if the wound seems insignificant – otherwise serious infections could set in!
- Always observe the following instructions:
 - Disengage loading, remove fittings and hose connections only when the system is not under pressure. i.e. release the pressure before working on pressurized lines!
 - Never walk or run on damaged or leaking pressure lines and hose connections. Replace damaged parts with new ones!
 - Never search for leaks with your bare hands, but wear protective gloves!
 - Use paper or wood to check for minor leaks. Never use an unprotected light or naked flame!
 - Have damaged flexible lines replaced by authorized workshops only!

- Leaks and damaged pressure lines must be immediately repaired or replaced by an authorized workshop or other skilled staff.
This not only increases the operating safety of your machine but also helps to protect the environment.
- Replace hydraulic hoses every 6 years from the date of manufacture, even if they do not seem to be damaged.

In this regard, we recommend that you observe all the relevant safety regulations for hydraulic lines, as well as the safety regulations regarding accident prevention and occupational health and safety in your country. Also observe [DIN 20020](#), part 1.
