adapting to the rapid changes taking place in the industrial scenario With the demands in the industrial arena increasingly tending to be lumpy the most effective strategy for planning and controlling production processes cannot be a static preconceived one Instead it is one that is flexible and is capable of adapting to the erratic changes in demand patterns Evolving such a strategy requires more of practical skill than mere theoretical knowledge of the subject This book explores the demands of the present day industrial environment and the techniques for addressing these demands through a number of case studies drawn from Indian industries The efficacy of various planning strategies the methods for implementing them and their suitability for different industries have been clearly explained in relation to these cases While the essentials of theory have been covered in a simple and straightforward style the stress is on developing the practical skills required to tackle the unpredictable problems and the unforeseen demands that pose a formidable challenge to modern industries The book places emphasis as much on the principles of heuristic techniques as on the systematic approach to production planning This book would serve as a useful textbook to postgraduate students of management as well as undergraduate students of industrial engineering It will be equally useful to the teaching community and the practicing professionals
