## **Planning Horizons Calendars And Timings In Sap Apo:**

Planning Horizons, Calendars and Timings in SAP Apo Shaun Snapp, 2013-04 Planning horizons and timing settings are critical to controlling the behavior of planning applications. But few people understand the impact that timing settings in one APO application have on other APO applications and what implications they have for controlling system output. APO is the most fully featured supply chain planning suite on the market and its sheer number of timing settings makes it one of the most complex as well. Keeping these settings straight and associating the timings across the modules as well as coordinating the timings with the connected systems is a challenge in APO. If you would like to better understand the timing settings in APO and other advanced planning systems or if your company is planning to implement APO, this book is for you. Here you will learn about the timing settings, planning horizons, and calendars in four of the most commonly implemented APO applications: DP, SNP, PP, DS, and GATP, and how timing settings in one APO module interact with and impact upon the timing settings in the other APO modules. By reading this book, you will gain a comprehensive overview of timings in the four most popular APO applications: DP, SNP, PP, DS, and GATP. Get an overview of what is created in each application and what is passed between the modules. Understand how the planning horizons, calendars, and timing settings of DP, SNP, PP, DS, and GATP relate to each other, how they influence the planning output, and how they connect with SAP ERP. Be able to differentiate between the various timing settings in APO and explain how they relate to one another. Benefit by getting a head start on understanding timing settings before the demo or proof of concept stage of a project. Avoid costly implementation errors by learning how to navigate APO's complex timing settings. Understand timing setting directions: backward and forward. Learn how to support a global business with a single APO application.
