The Gospel of Climate Skepticism Robin Globus Veldman,2019-10-22 Why are white evangelicals the most skeptical major religious group in America regarding climate change Previous scholarship has pointed to cognitive factors such as conservative politics anti science attitudes aversion to big government and theology Drawing on qualitative fieldwork The Gospel of Climate Skepticism reveals the extent to which climate skepticism and anti environmentalism have in fact become embedded in the social world of many conservative evangelicals Rejecting the common assumption that evangelicals skepticism is simply a side effect of political or theological conservatism the book further shows that between 2006 and 2015 leaders and pundits associated with the Christian Right widely promoted skepticism as the biblical position on climate change The Gospel of Climate Skepticism offers a compelling portrait of how during a critical period of recent history political and religious interests intersected to prevent evangelicals from offering a unified voice in support of legislative action to address climate change

Engineering and Science of Biomass Feedstock Production and Provision

Yogendra Shastri, Alan Hansen, Luis Rodríguez, K.C. Ting, 2014-02-10 The biomass based energy sector especially the one based on lignocellulosic sources such as switchgrass Miscanthus forest residues and short rotation coppice will play an important role in our drive towards renewable energy The biomass feedstock production BFP subsystem provides the necessary material inputs to the conversion processes for energy production This subsystem includes the agronomic production of energy crops and the physical handling and delivery of biomass as well as other enabling logistics Achieving a sustainable BFP system is therefore paramount for the success of the emerging bioenergy sector However low bulk and

energy densities seasonal and weather sensitive availability distributed supply and lack of commercial scale production experience create unique challenges Moreover novel region specific feedstock alternatives continue to emerge Engineering will play a critical role in addressing these challenges and ensuring the techno economic feasibility of this sector It must also integrate with the biological physical and chemical sciences and incorporate externalities such as social economic considerations environmental impact and policy regulatory issues to achieve a truly sustainable system Tremendous progress has been made in the past few years while new challenges have simultaneously emerged that need further investigation It is therefore prudent at this time to review the current status and capture the future challenges through a comprehensive book This work will serve as an authoritative treatise on the topic that can help researchers educators and students interested in the field of biomass feedstock production with particular interest in the engineering aspects
