Introduction to Manufacturing Michel Baudin, Torbjørn Netland, 2022-12-27 This

Introduction to Manufacturing focuses students on the issues that matter to practicing industrial engineers and managers. It offers a systems perspective on designing, managing, and improving manufacturing operations. On each topic, it covers the key issues with pointers on where to dig deeper. Unlike the many textbooks on operations management, supply chain management, and process technology, this book weaves together these threads as they interact in manufacturing. It has five parts: Getting to Know Manufacturing (Fundamental concepts of manufacturing as an economic activity from manufacturing strategy to forecasting market demand); Engineering the Factory (Physical design of factories and processes, the necessary infrastructure and technology for manufacturing); Making Information Flow (The central nervous system that triggers and responds to events occurring in production); Making Materials Flow (The logistics of manufacturing from materials handling inside the factory via warehousing to supply chain management); Enhancing Performance (Managing manufacturing performance and methods to maintain and improve it both in times of normal operations and emergencies). Supported with rich illustrations and teaching aids, Introduction to Manufacturing is essential reading for industrial engineering and management students of all ages and backgrounds engaged in the vital task of making the things we all use.

Innovation Management Keith Goffin, Rick Mitchell, 2025-08-26

Managing innovation is like competing in an Olympic Pentathlon: excellent performance in one sport will not win you the medal. This textbook explores how top performance in 5 key areas—ideation, prioritization, implementation, strategy, and people and organization—is essential to success in today's ever-changing business landscape. Structured around the authors' original Innovation Pentathlon framework, the book explains what innovation is, why it is important, and how it can be managed. Built upon the authors' extensive experience and with case studies covering companies from Tetley Tea to Singapore Airlines, this is a vital resource for students aiming to succeed in both their academic and professional lives. New to this edition: Embedded critical reflections on all aspects of management combined with practical management recommendations ensuring the textbook is highly relevant to current practicing managers while preparing students for their management careers post study. Extended chapter on innovation management in the service industries to reflect the increased importance of this sector. With a careful balance of both theory and practice, an improved structure, and a new and updated companion website, this is the essential companion for upper-level undergraduate, postgraduate, and MBA students of innovation management.

Computational Intelligence in Logistics and Supply Chain Management Thomas Hanne, Rolf Dornberger, 2016-07-27

This book deals with complex problems in the fields of logistics and supply chain management and discusses advanced methods, especially from the field of computational intelligence (CI), for solving them. The first two chapters provide general introductions to logistics and supply chain management on the one hand and to computational intelligence on the other hand. The subsequent chapters cover specific fields in logistics and supply chain management, work out the most relevant problems found in those fields, and discuss approaches for solving them. Chapter 3 discusses problems in the field of production and inventory management.

Chapter 4 considers planning activities on a finer level of granularity which is usually denoted as scheduling In chapter 5 problems in transportation planning such as different types of vehicle routing problems are considered While chapters 3 to 5 rather discuss planning problems which appear on an operative level chapter 6 discusses the strategic problem of designing a supply chain or network The final chapter provides an overview of academic and commercial software and information systems for the discussed applications There appears to be a gap between general textbooks on logistics and supply chain management and more specialized literature dealing with methods for computational intelligence operations research etc for solving the complex operational problems in these fields For readers it is often difficult to proceed from introductory texts on logistics and supply chain management to the sophisticated literature which deals with the usage of advanced methods This book fills this gap by providing state of the art descriptions of the corresponding problems and suitable methods for solving them
