

The transport/raise (5) button is usually used to raise and lower the attached equipment during work.

233

Continuous mode

The hydraulic master (7) can be used to activate or deactivate the power supply for all remote control valves and EDC situations.

Switch positions

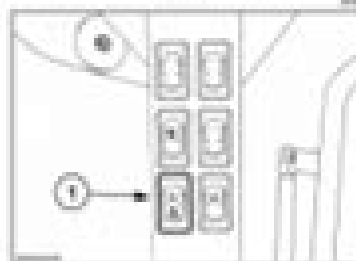

Up = remote control valves opening

center = EDC and remote control valves

not opening

down = EDC and remote control valves

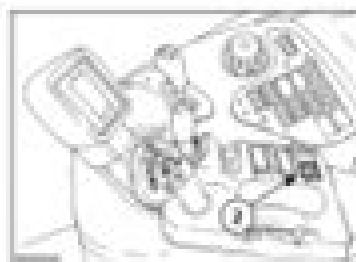

closing

234

IMPORTANT: To avoid unintentional activation of the power lift or the electrical remote control valves, the power supply must always be switched off when traveling on roads.

The stop button (2) is a safety element which can e.g. be pressed in an emergency situation. If the stop button is pressed, all EDC functions are interrupted and the red warning on the control panel lights up. To continue work, the EDC must be reactivated.

235

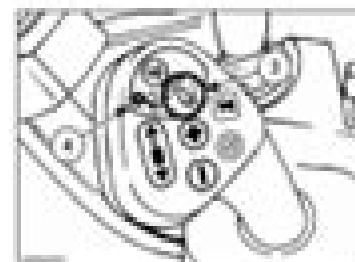

The RAISE / LOWER button (3) is used to activate the EDC system and/or for alternating between power lift raising and lowering.

Activate - The EDC is activated by pressing the button (3). The red buttons on the right-hand control panel glow red. If the tractor was switched off in "Control" mode, the power lift moves into its upper limit stop (in the lifting limitation set). If the tractor was switched off in "Transport" mode, the power lift moves into its lower limit position (setting made using limit for position control).

Speedometer - By alternately pressing the button (3), the power lift is raised from its working position into the transport position (only raised up to the height of the set lifting limitation, speed of lifting cannot be set) or the power lift is lowered from the transport position into the working position (corresponding to setting for position control).

NOTE: The speed of lowering can be set in a continuously variable manner.

If the power lift is in its transport position, the button (3) lights up.
