the query language for these objects The most important feature of XOBEDBPL is that each XML operation is statically type checked against the declared XML schema In XOBEDBPL the XML integration is extended regarding the manipulation of XML objects Before XML objects could only be queried but not updated The static type checking idea is kept and enhanced to include updates While XOBEDBPL's intentions lie on the development of web applications all objects can remain transient XOBEDBPL is supposed to deal with persistent objects as well
