Maintenance Planning P. Lyonnet,2013-03-09 As the developments in engineering production techniques have resulted in an increasing dependence on automation the increasing complexity of these systems has made the reliability of the machines a matter of great importance An unexpected breakdown can be a very expensive experience for the company Further in the aerospace industry problems of reliability maintainability and availability are critical For a long time industrial research and training centres have been interested primarily in the problems of design manufacture and production recently however there has been a growing interest in the study of maintenance and reliability The concept of maintainability for example first appeared in 1954 in the US army Since then a variety of techniques and methodologies have been developed and implemented to meet the challenge of the new needs The aim of this book is to present these methods and investigate their effectiveness and in so doing to help practising engineers

gain a better understanding of the problems. The many examples and applications given here should make it a valuable teaching aid to students taking courses in engineering maintenance. This second edition has been revised and enlarged to take account of the most recent developments and illustrate their application to the solution of problems. Transdisciplinary Engineering Methods for Social Innovation of Industry 4.0 M. Peruzzini, M. Pellicciari, C. Bil, 2018-09-14 The concept of concurrent engineering (CE) was first developed in the 1980s. Now often referred to as transdisciplinary engineering, it is based on the idea that different phases of a product life cycle should be conducted concurrently and initiated as early as possible within the Product Creation Process (PCP). The main goal of CE is to increase the efficiency and effectiveness of the PCP and reduce errors in later phases as well as incorporating considerations including environmental implications for the full lifecycle of the product. It has become a substantive methodology in many industries and has also been adopted in the development of new services and service support. This book presents the proceedings of the 25th ISPE Inc International Conference on Transdisciplinary Engineering held in Modena, Italy, in July 2018. This international conference attracts researchers, industry experts, students and government representatives interested in recent transdisciplinary engineering research, advancements and applications. The book contains 120 peer reviewed papers selected from 259 submissions from all continents of the world, ranging from the theoretical and conceptual to papers addressing industrial best practice and is divided into 11 sections reflecting the themes addressed in the conference program and addressing topics as diverse as Industry 4.0 and smart manufacturing, human centered design, modeling, simulation and virtual design and knowledge and data management among others. With an overview of the latest research results, product creation processes and related methodologies, this book will be of interest to researchers, design practitioners and educators alike.
