

Lesson Quiz Review

22.2 Plant Diversity

Place the information below in your notebook, printed on the worksheet.

1. Nonvascular plants (mosses, liverworts, hornworts) must grow in a moist place, because they need this for the gametes.
2. Vascular plants have a few unique seed types. If they have angiosperms, the seed has a developing embryo.
3. In seed plants, an embryo (seed) is a tiny new plant that grows after the seed. The seed also contains endosperm, which provides food for the embryo after it germinates.
4. Gymnosperms produce seeds with protective papery scales. These seed-bearing plants are called conifers.
5. Angiosperms, which are a plant classification, allow plants to move water and nutrients upward without gravity. They also use a plant growth habit.
6. Angiosperms are divided into eudicotyledons and monocots. These plants have a flower that is a multiple of 4 or 5. Angiosperms are also called seed plants.
