Stiglitz, 2025-04-03 Joseph E Stiglitz has had a remarkable career He is a brilliant academic capped by sharing the Nobel Memorial Prize in Economics and the Nobel Peace Prize and honorary degrees from Harvard Cambridge Oxford and more than fifty other universities and elected not only to the National Academy of Sciences and the American Academy of Arts and Letters but the Royal Society and the British Academy a public servant who served as Chair of President Clinton's Council of Economic Advisors and Chief Economist and Senior Vice President of the World Bank headed international commissions for the UN and France and was awarded the French Legion of Honor and Australia's Sydney Peace Prize a public intellectual whose numerous books on vital topics have been best sellers What brought him to economics were his concerns about the inequality and discrimination he saw growing up Wanting to understand what drives it and what can be done about it has been his lifelong passion This book gathers together and

extends to new frontiers this lifelong work drawing upon the challenges and insights of each of these phases of his career In a still very widely cited paper written fifty years ago Stiglitz set forth the fundamental framework for analyzing intergenerational transfer of wealth and advantage which plays a central role in persistent inequality That and subsequent work developed most fully here for the first time described today's inequality as a result of centrifugal forces increasing inequality and centripetal forces reducing it In recent decades the centrifugal forces have strengthened the centripetal forces weakened His general theory provides a framework for understanding the marked growth in inequality in recent decades and for devising policies to reduce it A central message is that ever increasing inequality is not inevitable Inequality is in a fundamental sense a choice Stiglitz explains that inequality does not largely arise from differences in savings rates between capitalists and others though that may play a role as Piketty Marx and Kaldor suggest but rather it originates importantly from the rules of the game which have weakened the bargaining power of workers as they have increased the market power of corporations He also explains how monetary authorities have contributed to increasing wealth inequality and how unless something is done about it likely changes in technology such as AI and robotization will make matters worse He describes policies that can simultaneously reduce inequality and improve economic performance

Monetary Policy after the Great Recession Arkadiusz Sieroń, 2020-11-09 Walter Bagehot noticed once that John Bull can stand many things but he cannot stand two per cent Well for several years he has had to stand interest rates well below that in some countries even below zero However despite this sacrifice the economic recovery from the Great Recession has been disappointingly weak This book's aim is to answer this question The central thesis of the book is that the standard understanding of the monetary transmission mechanism is flawed That understanding adopts erroneous assumptions such as that low interest rates always stimulate economic growth by boosting the credit supply investment and consumption and does not fully take into account several unintended channels of monetary policy such as risk taking high level of debt or zombification of the economy In other words the effectiveness of monetary policy is limited during economic downturns accompanied by the debt overhang and the balance sheet recession and generates negative effects which can make the policy counterproductive The author provides a thorough analysis of the issues related to the interest rates in the conduct of monetary policy such as the risk taking channel of monetary policy the portfolio balance channel and the wealth effect zombie firms in the economy the misallocation of resources as well as the neutral interest rate targeting and the difference between the neutral and natural interest rate and the negative interest rate policy The book is written in an accessible and engaging manner and will be a valuable resource for scholars of monetary economics as well as readers interested in unconventional monetary policy

Markets William A. Jackson, 2019-04-18 Defining markets has never been an easy task Despite their importance for economic theory and practice they are hard to pin down as a concept and economists have tended to adopt simplified axiomatic models or rely on piecemeal case studies This book argues that an extended range of theory social as well as

economic can provide a better foundation for the portrayal of markets The book first looks at the definition of markets their inadequate treatment in orthodox economic theory and their historical background in the pre capitalist and capitalist eras It then assesses various alternatives to orthodox theory categorised as social cultural structural functional and ethical approaches Among the alternatives considered are institutionalist accounts Marxian views network models performativity arguments field theories Austrian views and ethical notions of fair trade A key finding of the book is that these diverse approaches valuable as they are could present a more effective challenge to orthodoxy if they were less disparate Possibilities are investigated for a more unified theoretical alternative to orthodoxy Unlike most studies of markets this book adopts a fully interdisciplinary viewpoint expressed in accessible non technical language Ideas are brought together from heterodox economics social theory critical realism as well as other social sciences such as sociology anthropology and geography Anybody seeking a broad critical survey of the theoretical analysis of markets will find this book useful and it will be of great interest to economists social scientists students and policy makers Artificial Intelligence in Education Myint Swe Khine,2024-10-30 This comprehensive volume explores the possibilities challenges and ethical considerations of Artificial Intelligence AI in education through a machine generated literature review that examines emerging research trends and findings Each chapter presents summaries of pre defined topics and includes a human written introduction by the book editor It covers critical areas such as educational data mining learning analytics personalised learning adaptive assessment intelligent tutoring systems as well as the ethical challenges of AI in education This volume provides valuable insights for educators researchers policymakers and students seeking to understand the transformative potential of AI in education It serves as a reference point for navigating the evolving landscape of AI assisted learning and offers a glimpse into the future of education in an AI driven world The auto summaries were generated by a recursive clustering algorithm using the Dimensions Auto summariser from Digital Science The editor of this book selected the SN content to be auto summarised and decided the order of appearance Please note that these are extractive auto summaries consisting of original sentences but are not representative of the original paper as we do not show the full length of the publication Please note that only published SN content is represented here and that machine generated books are still at an experimental stage
