Data Management in Large-Scale Education Research Crystal Lewis, 2024-07-09 Research data management is becoming more complicated. Researchers are collecting more data using more complex technologies all the while increasing the visibility of our work with the push for data sharing and open science practices. Ad hoc data management practices may have worked for us in the past but now others need to understand our processes as well, requiring researchers to be more thoughtful in planning their data management routines. This book is for anyone involved in a research study involving original data collection. While the book focuses on quantitative data typically collected from human participants, many of the practices covered can apply to other types of data as well. The book contains foundational context, instructions and practical examples to help researchers in the field of education begin to understand how to create data management workflows for large scale, typically federally funded research studies. The book starts by describing the research life cycle and how data management fits within this larger picture. The remaining chapters are then organized by each phase of the life cycle with examples of best practices provided for each phase. Finally, considerations on whether the reader should implement and how to integrate those practices into a workflow are discussed. Key Features: Provides a holistic approach to the research life cycle showing how project management and data management processes work in parallel and collaboratively. Can be read in its entirety or referenced as needed throughout the life cycle. Includes relatable examples specific to education research. Includes a discussion on how to organize and document data in preparation for data sharing requirements. Contains links to example documents as well as templates to help readers implement practices.

eSourcing Capability Model

for Service Providers eSCM-SP Bill Hefley, Elaine B. Hyder, Keith Heston, Mark Paulk, 2015-01-01 The eSourcing Capability Model for Service Providers eSCM SP is the best practices model that supports sourcing organizations successfully manage and reduce their risks and improve their capabilities across the entire sourcing life cycle. It addresses the critical issues related to IT enabled sourcing eSourcing for both outsourced and in sourced shared services agreements. Each of the Model's 84 Practices is distributed along three easy to follow dimensions: Sourcing Life cycle, Capability Area, and Capability Level, and have been applied in IT BPO and KPO settings. The eSCM SP has been designed to complement existing quality models so that service providers can capitalize on their previous improvement efforts. ITIL V3 suggests that ITIL be supplemented with eSCM when service management is performed in the context of a sourcing arrangement. A series of documents comparing the eSCM SP with other models and standards has been developed. Developed by The IT Services Qualification Center ITSQC and endorsed by a number of organizations including IAOP International Association of Outsourcing Professionals, this title represents a major step forward for professionals looking to implement Best Practice within the Industry. **Service design** Great Britain. Office of Government Commerce, 2007-05-30 The Service Design phase of the ITIL Service Lifecycle uses business requirements to create services and their supporting practices. This volume covers design principles for applications, infrastructure, processes, and resources, as well as sourcing models. Service managers will also find guidance on the engineering of sound requirements, supplier management, and design considerations for outsourcing. *COBIT Mapping* ITGI, 2007 **The Lean Electronic Health Record** Ronald G. Bercaw, Kurt A. Knoth, MBA, Snedaker, 2017-12-15 The Electronic Health Record (EHR) is a reflection of the way your organization conducts business. If you're looking to make lasting improvements in the delivery of care, you must start with looking at the system from your patient's perspective to understand what is of value and what is simply waste. When you begin seeing in this way, you'll begin building in this way. When you begin building in this way, you'll begin driving improvements in your care delivery. Only then will your EHR be able to support lasting improvements, driving better patient care and outcomes at lower costs. Healthcare organizations are under increasing pressure to improve on all fronts. This can be achieved, but only by changing the very way we look at care. No longer can we look at care just from the organization or provider's perspective; we must start with the end in mind: the patient. Compelling case studies discussed throughout this book demonstrate that modifying processes and workflows using Lean methodologies lead to substantial improvements. These changes must be undertaken in a clear, consistent, and methodical manner. When implementing an EHR based on existing workflows and sometimes antiquated processes, organizations struggle to sustain improvements. Many organizations have deployed an EHR and now face optimization challenges, including the decision to move to a new EHR vendor. The financial implications of upgrading, optimizing, or replacing an EHR system are significant and laden with risk. Choose the wrong vendor, the wrong system, or the wrong approach, and you may struggle under the weight of that decision for decades. Organizations that successfully leverage the convergence of needs, patients demanding

better care providers needing more efficient workflows and organizations desiring better financials will survive and thrive This book ties together current healthcare challenges with proven Lean methodologies to provide a clear concise roadmap to help organizations drive real improvements in the selection implementation and on going management of their EHR systems Improving patient care improving the provider experience and reducing organizational costs are the next frontier in the use of EHRs and this book provides a roadmap to that desired future state
