still works mainly as Thomas Edison invented it converts more than 90% of the consumed electricity into heat Given the availability of newer lighting technologies that convert a greater percentage of electricity into useful light there is potential to decrease the amount of energy used for lighting in both commercial and residential applications Although technologies such as compact fluorescent lamps CFLs have emerged in the past few decades and will help achieve the goal of increased energy efficiency solid state lighting SSL stands to play a large role in dramatically decreasing U S energy consumption for lighting Since the publication of the 2013 National Research Council report Assessment of Advanced Solid State Lighting the penetration of SSL has increased dramatically with a resulting savings in energy and costs that were foreshadowed by that study What was not anticipated then is the dramatic dislocation and restructuring of the SSL marketplace as cost reductions for light emitting diode LED components reduced profitability for LED manufacturers At the same time there has been the emergence of new applications for SSL which have the potential to create new markets and commercial opportunities for the SSL industry Assessment of Solid State Lighting Phase Two discusses these aspects of change highlighting the progress of commercialization and acceptance of SSL and reviewing the technical advances and challenges in achieving higher efficacy for LEDs and organic light emitting diodes This report will also discuss the recent trends in SSL manufacturing and opportunities for new applications and describe the role played by the Department of Energy DOE Lighting Program in the development of SSL

Lewens,2018-06-18 Is human nature something that the natural and social sciences aim to describe or is it a pernicious fiction What role if any does human nature play in directing and informing scientific work Can we talk about human nature without invoking either implicitly or explicitly a contrast with human culture It might be tempting to think that the respectability of human nature is an issue that divides natural and social scientists along disciplinary boundaries but the truth is more complex The contributors to this collection take very different stances with regard to the idea of human nature They come from the fields of psychology the philosophy of science social and biological anthropology evolutionary theory and the study of animal cognition Some of them are human nature enthusiasts some are sceptics and some say that human nature is a concept with many faces each of which plays a role in its own investigative niche Some want to eliminate the notion altogether some think it unproblematic others want to retain it with reforming modifications Some say that human nature is a target for investigation that the human sciences cannot do without others argue that the term does far more harm than good The diverse perspectives articulated in this book help to explain why we disagree about human nature and what if anything might resolve that disagreement **Nanotoxicology for Agricultural and Environmental Applications** Mahendra
