*The Nature of the Page* Joshua Calhoun, 2020-01-24 An innovative study of books and reading that focuses on papermaking in the Renaissance. In *The Nature of the Page*, Joshua Calhoun tells the story of handmade paper in Renaissance England and beyond. For most of the history of printing, paper was made primarily from recycled rags, so this is a story about using old clothes to tell new stories about plants used to make clothes and about plants that frustrated papermakers' best attempts to replace scarce natural resources with abundant ones. Because plants like humans are susceptible to the ravages of time, it is also a story of corruption and the hope that we can preserve the things we love from decay. Combining environmental and bibliographical research with deft literary analysis, Calhoun reveals how much we have left to discover in familiar texts. He describes the transformation of plant material into a sheet of paper, details how ecological availability or scarcity influenced literary output in the sixteenth and seventeenth centuries, and examines the impact of the various colors and qualities of paper on early modern reading practices. Through a discussion of sizing (the mixture used to coat the surface of paper so that ink would not blot into its fibers), he reveals a surprising textual interaction between animals and readers. He shows how we might read an indistinct stain on the page of an early modern book to better understand the mixed-media surfaces on which readers, writers, and printers recorded and revised history. Lastly, Calhoun considers how early modern writers imagined paper decay and how modern scholars grapple with biodeterioration today. Exploring the poetic interplay between human ideas and the plant, animal, and mineral forms through which they are mediated, *The Nature of the*

Page prompts readers to reconsider the role of the natural world in everything from old books to new smartphones

*Composing under the Skin* Paul Craenen, 2014-04-29 A revealing study of the physical presence of the musician in musical performance. Fingers slipping over guitar strings, the tap of a bow against the body of a cello, a pianist humming along to the music. Contemporary composers often work with parasitic, non-conventional sounds such as these. Are they to be perceived as musical elements or do they shift attention to the physical effort of music making: contact between a body and an instrument? Composer Paul Craenen explores ways in which the musician's body is revealed in musical performance. He leads us from Cage, Lachenmann, Kagel and their contemporaries to a discussion of how today's generation of young composers is writing a body paradigm into composition itself. Micro-temporal physical gestures and instrumental timbre provide the key to unveiling the physical presence of both a musician and a composing body. The author's concept of intercorporeality, along with the idea of an alternating linear and non-linear relationship of the composing body to time, casts new light on the relationship between musicians, composers and music consumers.

greenhouse gases and serves to enhance the tropospheric temperature The dominant part of available water on Earth resides in the oceans Parts are locked up in the land ice on Greenland and Antarctica and a smaller part is estimated to exist as groundwater If all the ice over the land and all the glaciers were to melt the sea level would rise by some 80 m In comparison the total amount of water vapor in the atmosphere is small it amounts to 25 kg m<sup>2</sup> or the equivalent of 25 mm water for each column of air Yet atmospheric water vapor is crucial for the Earth's energy balance The book gives an up to date presentation of the present knowledge Previously published in Surveys in Geophysics Volume 35 No 3 2014
