

NOKIA NOTIFICATIONS (II)

- The process of receiving notifications is straightforward. The application, implementing Client API, registers itself for receiving notifications by sending service specific *sender identification* (sender ID) to Nokia Notifications server.
- Nokia Notifications server responds by sending a device specific *registration identification* (registration ID, RID) to the client device.
- The client application then provides the RID for the 3rd party server, which implements Service API.
- Finally, the 3rd party server can send notifications, via Nokia Notifications server, for the devices whose registration ID it knows. It is the responsibility of the developer to implement a) client application with Client API and b) server with Service API.

Journal of Communications and Networks, 2001 **China Telecom Monthly Newsletter**, *Embedded Microprocessor Systems* Christian Müller-Schloer, 1996. Embedded microprocessor systems are affecting our daily lives at a fast pace mostly unrecognised by the general public. Most of us are aware of the part they are playing in increasing business efficiency through office applications such as personal computers, printers and copiers. Only a few people however fully appreciate the growing role of embedded systems in telecommunications and industrial environments or even in everyday products like cars and home appliances. The challenge to engineers and managers is not only highlighted by the sheer size of the market: 1.5 billion microcontrollers and microprocessors are produced every year but also by the accelerating innovation in embedded systems towards higher complexity in hardware, software and tools as well as towards higher performance and lower consumption. To maintain competitiveness in this demanding environment an optimum mix of innovation time to market and system cost is required. Choosing the right options and strategies for products and companies is crucial and rarely obvious. In this book the editors have therefore skilfully brought together more than fifty contributions from some of the leading authorities in embedded systems. The papers are conveniently grouped in four sections.

Quick Recipes on Symbian OS Michael Aubert, 2008-07-31. Symbian OS continues to be the top operating system for smartphones across the world with the number of Symbian OS phones sold now well beyond the 100 million mark. As more and more developers realize the huge opportunities available designing with Symbian OS one of the first major obstacles they face is the sheer length of time it takes to start producing functional C applications for Symbian OS phones. Quick Recipes on Symbian OS provides easy to use recipes for mastering common development tasks. The book's structured time focused approach to becoming familiar with the basics allows readers to get up and running quickly. From the Author: This book is meant as an entry point into the Symbian OS C development ecosystem. Our goal is to allow you to create a working prototype of your application for Symbian OS within 2 weeks using only this book, a computer, an internet connection and a Symbian phone. Inside you will find reusable modules implementing the most common tasks developers usually have to labour on along with enough information for you to understand them and integrate them into your own application. This book can be used in several ways as a learning exercise.
