Reducing greenhouse gas emissions from deforestation Great Britain: Parliament: House of Commons: Environmental Audit Committee,2009-06-29 An area of tropical forest the size of England continues to be lost each year This gives rise to around 17 per cent of global greenhouse gas emissions greater than global emissions from transport Addressing deforestation is as essential as decarbonising electricity or transport if the world is to avoid dangerous climate change A failure to act on deforestation could double the cost of avoiding dangerous climate change to 2030 Deforestation is caused by a range of factors many of which are exacerbated by a growing global population and increasing consumption Halting deforestation requires a support for rainforest nations to help them manage their development so that it does not allow continued deforestation b management of the demand for commodities whose production encourages deforestation and c the introduction of a mechanism to pay developing countries for maintaining and in due course recreating their forests The UK needs to act in all three areas if its policies on deforestation are to be successful Ignoring any one undermines the effectiveness and durability of action in the other areas As part of this work the Government must remove subsidies that contribute to deforestation such as biofuels policy develop sustainability standards for agricultural commodities implement and enforce government timber procurement and seek an EU wide ban on illegal timber imports combined with robust sanctions Illegal timber imports are still a fact of life within the UK timber trade The economic environmental and development case for immediate action on deforestation is clear But success is possible only if the international community works together effectively
