Construct, Merge, Solve & Adapt Christian Blum, 2024-06-18 This book describes a general hybrid metaheuristic for combinatorial optimization labeled Construct Merge Solve Adapt CMSA The general idea of standard CMSA is the following one At each iteration a number of valid solutions to the tackled problem instance are generated in a probabilistic way Hereby each of these solutions is composed of a set of solution components The components found in the generated solutions are then added to an initially empty sub instance Next an exact solver is applied in order to compute the best solution of the sub instance which is then used to update the sub instance provided as input for the next iteration In this way the power of exact solvers can be exploited for solving problem instances much too large for a standalone application of the solver Important research lines on CMSA from recent years are covered in this book After an introductory chapter about standard CMSA subsequent chapters cover a self adaptive CMSA variant as well as a variant equipped with a learning component for improving the quality of the generated solutions over time Furthermore on outlining the advantages of using set covering based integer linear programming models for sub instance solving the author shows how to apply CMSA to problems naturally modelled by non binary integer linear programming models The book concludes with a chapter on topics such as the development of a problem agnostic CMSA and the relation between large neighborhood search and CMSA Combinatorial

optimization problems used in the book as test cases include the minimum dominating set problem the variable sized bin packing problem and an electric vehicle routing problem The book will be valuable and is intended for researchers professionals and graduate students working in a wide range of fields such as combinatorial optimization algorithmics metaheuristics mathematical modeling evolutionary computing operations research artificial intelligence or statistics
