Topic: Business | Words: 275 | Pages: 1

Operations management is an essential process that uses raw materials to turn them into goods and services. Cachon, Girotra, & Netessine (2020) mention that this phenomenon is connected with the supply chain because the two reflect the internal and external operational systems, respectively. That is why it is not a surprise that operations management is relevant to both whole companies and managers in other organization functions.

Firstly, one should understand that operations management offers an essential impact on the financial and purchasing performance of every company, including, for example, Gucci. It is so because an operations manager determines what raw materials and methods to use to produce goods. Secondly, another significant function of an operations manager is to interview candidates and supervise employees (Wolniak, 2019).

That is why this person can modify and build the personnel of a firm to meet appropriate needs. Thirdly, Jacobs and Chase (2014) indicate that an operations manager optimizes "global supplier, production, and distribution networks" (p. 13). These efforts are sufficient for this professional to influence marketing and contribute to a firm's better image against the background of the main competitors.

In conclusion, the information above has shown that operations management is an irreplaceable phenomenon for every firm or company. This phenomenon explains what activities and methods are necessary to produce the goods and offer them to customers. That is why the notion under consideration is not isolated from other processes. As a result, operations management is essential for managers in other organization

Metaheuristics Celso C. Ribeiro, Pierre Hansen, 2012-12-06 Finding exact solutions to many combinatorial optimization
 problems in business engineering and science still poses a real challenge despite the impact of recent advances in
 mathematical programming and computer technology New fields of applications such as computational biology electronic
 commerce and supply chain management bring new challenges and needs for algorithms and optimization techniques
 Metaheuristics are master procedures that guide and modify the operations of subordinate heuristics to produce improved
 approximate solutions to hard optimization problems with respect to more simple algorithms They also provide fast and
 robust tools producing high quality solutions in reasonable computation times The field of metaheuristics has been fast
 evolving in recent years Techniques such as simulated annealing tabu search genetic algorithms scatter search greedy
 randomized adaptive search variable neighborhood search ant systems and their hybrids are currently among the most
 efficient and robust optimization strategies to find high quality solutions to many real life optimization problems A very large
