

Operating Adjustments

LEVELING

For optimum field performance be certain the planter is level. To level the planter, proceed as follows:

A174579

A—Parallel Arms

B—Support Angles

The master cylinder and slave cylinders, if properly charged, will locate the bottom of the frame tube approximately 20 inches (510 mm) above the ground. Normally when planting, parallel arms (A) should run approximately parallel to the ground. The parallel arm support angles (B) on the planting units should be vertical.

PLANTING DEPTH

A287143

Planting depth is controlled by the planting unit gauge wheels. Adjust planting depth as follows:

Raise planter to remove weight from unit gauge wheels. Lift depth adjusting handle and move it forward to decrease planting depth. Move the handle rearward to increase planting depth.

If small increments are desired, "walk" the handle from side to side. Adjust all rows to same setting as a starting point.

NOTE: When operating in the field, lower the planter only when the tractor is moving forward. This will prevent the planter openers from clogging in moist soil conditions.

Lower planter and drive at normal planting speed. Check the planting depth of all rows. Readjust handles as required to obtain desired depth.

Manufacturing variations in the planting units may require that the depth adjusting handles be positioned differently from row to row to achieve the same planting depth.

NOTE: Closing wheel pressure can affect seed placement and depth. Do not consider the entire center ridge left by closing wheels as part of seed depth. The loose soil in this ridge serves as mulch.
