

There are two solid ballast options: disks for the rear wheels or front weights (front or lower). The weights are usually cast iron.

Front ballasting

The use of ballast on the front of the tractor, in addition to an adjustment of the slip indexes, fulfills the vital function of ensuring the stability of the tractor.

This need occurs, for example, when you use long and/or heavy implements coupled to the hydraulic lift or when you operate in hilly terrain.

Front weights

Front weights are attached to the cradle (2) by the bolts (3). The weights are held together by the long bolts (1) and (4).

Remove the front weights alone:

1. Loosen the bolts (3). Slide the set of fasteners to the side.
2. Remove the long union bolts (1) and (4).
3. Remove the weights (5) one by one, manually or by means of a device, if necessary.

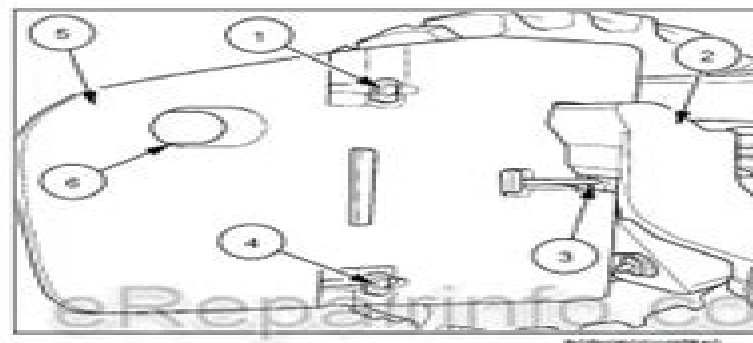

Remove the front weights together:

NOTE: Use an appropriate lifting device.

1. Loosen the bolts (3). Slide the set of fasteners to the side.
2. Pass a suitable metal bar into the hole (6) to connect a lifting device with adequate capacity.
3. Lift and move the weight of the counterweights sideways so they come free from the cradle (2).

NOTICE: With the weights assembled, do not use the machine unless the bolts (1), (3), and (4) are assembled and torqued to 169.0 N·m (124.6 lb ft). Check the bolt torque after 50 hours of operation.

For further information, see 6-88.
