*Embedded and Real-Time Operating Systems* K. C. Wang, 2023-09-14 This book covers the basic concepts and principles of operating systems showing how to apply them to the design and implementation of complete operating systems for embedded and real time systems. It includes all the foundational and background information on ARM architecture, ARM instructions and programming toolchain for developing programs, virtual machines for software implementation and testing, program execution, image, function call conventions, run time stack usage and link C programs with assembly code. *Embedded and Real Time Operating Systems* describes the design and implementation of a complete OS for embedded systems in incremental steps explaining the design principles and implementation techniques. For Symmetric Multiprocessing (SMP) embedded systems, the author examines the ARM MPcore processors which include the SCU and GIC for interrupts routing and interprocessor communication and synchronization by Software Generated Interrupts (SGIs). This Second Edition covers ARMv8 architecture and programming. These include exception levels, vector tables and exceptions handling, GICv3 programming and interrupt processing. It covers virtual to physical address mappings in ARMv8 and shows a 64 bit OS with kernel space in EL1 and separate user spaces in EL0. It also covers ARM TrustZone technology and secure systems. These include hardware and software architectures for secure and normal worlds interactions and switching between the two worlds. It shows a secure world comprising a secure monitor in EL3 to provide service functions and a normal world comprising processes in non secure EL1 which use SMC to access service functions in the secure world. Throughout the book, complete working sample systems demonstrate the design principles and implementation techniques. The content is suitable for advanced level and graduate students working in software engineering, programming and systems theory.

*Business Process Management* Mathias Weske, 2024-07-13 In this book, Mathias Weske details the complete business process lifecycle from process modeling to process enactment and process evaluation. After starting with the general foundations and abstractions in business process management, he introduces process modeling languages and process choreographies as well as formal properties of processes and data. Eventually, he presents both traditional and advanced business process management architectures covering, for example, workflow management systems, service oriented architectures and data driven approaches. The 4th edition of his book contains significant updates including a new section on directly follows graphs that play a crucial role in process mining. In addition, the core of declarative process modeling is introduced. The increasingly important role of data in business processes is addressed by a new section on data objects and data models in the data and decision chapter. To cover a recent trend in process automation, the enterprise systems architecture chapter now includes a section on robotic process automation.

Mathias Weske argues that all communities involved need to have a common understanding of the different aspects of business process management Hence his textbook is ideally suited for classes on business process management information systems architecture and workflow management alike The accompanying website [www bpm book com](http://www.bpm-book.com) contains further information and additional teaching material      *Fundamentals of Operating Systems - Concepts and Case Studies* Mr. Rohit Manglik,2024-09-24 Explains core OS concepts through case studies Covers process management scheduling memory file systems and real world examples of popular operating systems      *Algorithms and Architectures for Parallel Processing* Meikang Qiu,2020-09-29 This three volume set LNCS 12452 12453 and 12454 constitutes the proceedings of the 20th International Conference on Algorithms and Architectures for Parallel Processing ICA3PP 2020 in New York City NY USA in October 2020 The total of 142 full papers and 5 short papers included in this proceedings volumes was carefully reviewed and selected from 495 submissions ICA3PP is covering the many dimensions of parallel algorithms and architectures encompassing fundamental theoretical approaches practical experimental projects and commercial components and systems As applications of computing systems have permeated in every aspects of daily life the power of computing system has become increasingly critical This conference provides a forum for academics and practitioners from countries around the world to exchange ideas for improving the efficiency performance reliability security and interoperability of computing systems and applications ICA3PP 2020 focus on two broad areas of parallel and distributed computing i e architectures algorithms and networks and systems and applications      Software Modeling and Design Hassan Gomaa,2011-02-21 This book covers all you need to know to model and design software applications from use cases to software architectures in UML and shows how to apply the COMET UML based modeling and design method to real world problems The author describes architectural patterns for various architectures such as broker discovery and transaction patterns for service oriented architectures and addresses software quality attributes including maintainability modifiability testability traceability scalability reusability performance availability and security Complete case studies illustrate design issues for different software architectures a banking system for client server architecture an online shopping system for service oriented architecture an emergency monitoring system for component based software architecture and an automated guided vehicle for real time software architecture Organized as an introduction followed by several short self contained chapters the book is perfect for senior undergraduate or graduate courses in software engineering and design and for experienced software engineers wanting a quick reference at each stage of the analysis design and development of large scale software systems
