

Echoflex Installation Guide

Universal Input-Output Interface

UIO

Overview

The Universal Input-Output Interface (UIO) facilitates the creation of hybrid solutions by integrating Echoflex wireless devices into existing panels, wired control systems, or building energy management systems. It provides functionality to support hospitality applications and timeclocks, connect shared occupancy spaces, and recognize presets.

The UIO's two hardware input channels support 0–10 V or 4–20 mA signals and have wireless outputs assigned to translate analog or digital signals into a number of wireless message types. In addition to gateways or controllers, another UIO can be linked to reproduce a sensor's analog or digital value.

Two output channels deliver 0–10 V or 4–20 mA signals driven by wireless devices linked to the channel. Combining the channels can replicate an Echoflex ELED1 controller with dimming (CH1) and relay control (CH2). Each output channel interprets a wireless message and outputs an analog value on the selected channel.

This document covers installation, testing, and settings that apply to all UIO models. Garibaldi Pro software, Echoflex's in-field commissioning tool, is required to configure additional settings. The software is available for download at echoflexsolutions.com.

The product package includes the interface and two 3-pole WAGO connectors.

Prepare for Installation

To ensure optimal function, consider the installation environment and the following guidelines:

- Avoid spaces with high density construction materials and large metal appliances or fixtures as they may disrupt wireless reception.
- For optimal performance, switches and sensors should be installed within a 24 m (80 ft) unobstructed view of the interface. Consider adding a repeater to extend the wireless signal, if required.
- Mount the interface to an electrical junction box (preferably non-metallic) or a panel in a location and at a height where it is not subject to tampering by unauthorized personnel.
