Logical Foundations of Database Transformations for Complex-Value Databases Qing Wang, 2010 Database transformations consist of queries and updates which are two fundamental types of computations in any databases the first provides the capability to retrieve data and the second is used to maintain databases in light of ever changing application domains This dissertation aims to lay down the foundations for establishing a theoretical framework of database transformations in the context of complex value databases The previous findings reveal that it is very difficult to characterise common features of database queries and updates in a way which is meaningful for further investigations Nevertheless the advent of the sequential Abstract State Machine ASM thesis capturing sequential algorithms sheds light on the study of database transformations Observing that the class of computations described by database transformations may be formalised as algorithms respecting database principles we propose the database ASM thesis for a complete characterisation of database transformations It turns out that every

database transformation characterised by five postulates can be behaviourally simulated by a database Abstract State Machine DB ASM with the same signature and background and vice versa Furthermore a logic for DB ASMs is defined In spite of bounded non determinism permitted by DB ASMs the logic is proven to be sound and complete *Engineering Technology and Applications* Fun Shao,Wise Shu,Tracy Tian,2014-08-19 Engineering Technology and Applications contains the contributions presented at the 2014 International Conference on Engineering Technology and Applications ICETA 2014 Tsingtao China 29 30 April 2014 The book is divided into three main topics Civil and environmental engineering Electrical and computer engineering Mechanical engineeringCon
