Australia Vietnamese Language Education and Change In and Outside Vietnam brings together an excellent collection of chapters that highlight the diverse and important but under explored roles Vietnamese language plays in different settings within and outside Vietnam The fifteen chapters of this much needed book provide unique insights into various aspects and meanings of Vietnamese language Collectively the volume contributes to broadening our view about the evolution and transformation of Vietnamese language under the impacts of local national regional and global forces The book invites readers to engage in a reflective and intersectional approach to rethinking and re examining our understandings of the changes and developments of Vietnamese language over the history of the country Dr Ly Tran Professor Centre for Research for Educational Impact REDI Deakin University Australia and Founder Australia Vietnam International Education Centre

The Restoration of Sunnism Ogden Goelet, Sameh Iskander, 2022-03-01. The Restoration of Sunnism is a study of the early history of Islamic law schools' madrasa, madris, and their professors in late Fatimid and Ayyubid Egypt. It describes the origin and spread of these institutions, their teachers, and their role in the religious life of Egypt. This work is a lightly revised version of the author's 1976 University of Pennsylvania doctoral dissertation, which remains one of the most important works on the history of the premodern institution of the madrasa to date. Unlike many publications on the madris in recent decades, which argue that medieval Islamic legal education was informal and lacked structure, the present work endeavors to detect the elements of structure and order in the institution of the madrasa and in its educational curricula and the practices associated with it. Leiser's ground-breaking work stands out for its attention to detail and to the political, economic, and religious background of twelfth and thirteenth century Egypt.

This book comprises 6 sections covering the fundamentals of the extracellular matrix as well as the development and challenges of using biologically derived materials and its advanced biomedical applications. This book reports the fundamentals of the extracellular matrix and its impact on the development of innovative materials, provides an overview of the advanced methodologies used to develop biologically derived materials, and describes the challenges of the synthesis and processing of the different materials. Furthermore, it presents the biological activities, structural and physicochemical properties of such materials, and the modification methods pursued to improve their inherent properties. The wide range of advanced applications are covered as well, including the combination with emerging technologies underlying tissue engineered scaffolding, drug delivery systems, 3D in vitro tissue and cancer models, 3D bioprinted models, bioinks, and more. This reference work serves as a core reference for multidisciplinary students, undergraduates, and Ph.D. students, and a wide range of established researchers and professionals working in the medical field, e.g., orthopaedics, radiology, dentistry, and cancer.
