

2. Thread the fuel shutoff solenoid, 1, into the fuel injection pump, 2. Use pliers to tighten the solenoid into the injection pump.
3. Connect the wiring harness lead, 3, into the fuel shutoff solenoid, 1.
4. Connect the negative (-) battery cable to the battery.

111

Op. 55 414

ENGINE OIL PRESSURE SWITCH

The oil pressure sender, 1, is located on the top front side of the engine. The switch opens under normal oil pressure (above 6 PSI) and closes when oil pressure is low (below 6 PSI) to complete the ground circuit of the oil pressure warning light.

When the ground circuit is completed, the oil pressure warning light illuminates on the instrument panel when the key switch is turned to the "ON" position and goes out when the engine is started. If the light does not go out after the engine has started, first check the engine oil level. If oil level is correct, check for a malfunctioning sender or engine oil pump.

112

Engine Oil Pressure Switch Testing

1. Using an ohmmeter, touch one test lead to the pressure switch terminal, 1, and the other test lead to the switch body, 2.
2. Observe the ohmmeter. There should be little or no resistance, indicating continuity in the switch. If there is no continuity, the switch is defective and needs replaced.

NOTE: The following test is not a calibrated test. The purpose of the test is to see if the switch opens at pressure.

1. While the test leads are connected to the switch, pressurize the switch oil pressure port, 3, with low pressure (10-30 psi) compressed air.
2. Observe the ohmmeter. While air pressure is being supplied to the oil pressure port, the ohmmeter should indicate high resistance, or no continuity. If there is continuity, the switch is defective and needs replaced.

113

CAUTION

Do not use high pressure compressed air for the following test, otherwise damage may occur to the oil pressure switch.
