Angola International Monetary Fund. African Dept.,2024-03-27 Angola's economic recovery in 2021-22 was nearly halted in 2023 by a double shock as both oil production and prices weakened and the debt moratorium ended In response the authorities took significant fiscal consolidation measures including by cutting fuel subsidies and tightened monetary policy Angola continues to face significant challenges including debt vulnerabilities and the need to diversify the economy as oil production declines over the long term The authorities reform agenda including the new 2023-27 National Development Plan is focused on these challenges

Advanced Operating Systems and Kernel Applications: Techniques and Technologies Wiseman, Yair, Jiang, Song, 2009-09-30 This book discusses non distributed operating systems that benefit researchers academicians and practitioners Provided by publisher Software Engineering of Fault Tolerant Systems P. Pelliccione, 2007 In architecting dependable systems what is required to improve the overall system robustness is fault tolerance Many methods have been proposed to this end the solutions are usually considered late during the design and implementation phases of the software life cycle e.g. Java and Windows NT exception handling thus reducing the effectiveness error and fault handling Since the system design typically models only normal behaviour of the system while ignoring exceptional ones the implementation of the system is unable to handle abnormal events Consequently

the system may fail in unexpected ways due to faults It has been argued that fault tolerance management during the entire life cycle improves the overall system robustness and that different classes of threats need to be identified for and dealt with at each distinct phase of software development depending on the abstraction level of the software system being modelled This book builds on this trend and investigates how fault tolerance mechanisms can be applied when engineering a software system In particular it identifies the new problems arising in this area introduces the new models to be applied at different abstraction levels defines methodologies for model driven engineering of such systems and outlines the new technologies and validation and verification environments supporting this
