10. Using a crane and slings capable of lifting the weight of the engine, lower the engine from the vehicle. Disconnect the engine from the vehicle. Check to ensure that the engine is disconnected from any power, with the exception of the remote starter switch. Carefully lift the engine from the compartment and place it on a clean surface. The engine should be kept in a clean, dry place.

## replace

To fit the engine into the compartment, the procedure is the reverse of the removal procedure, following the following points:

1. Before fitting the engine into position, ensure that the engine is clean and free of any oil or dirt. Check the oil level in the oil sump and ensure that the oil is at the correct level.

2. Position the engine in the compartment, so that the oil sump is at the bottom. Connect the oil sump to the oil pump. Connect the oil pump to the oil filter. Connect the oil filter to the oil pressure transmitter.

3. Work the engine from its original position, until the position of the engine is correct. Tighten the engine mounting bolts. Check that there is a 1.27 mm (0.050 in.) gap between the engine and the stop plate and the compensator stop bracket (see Fig. 1B.1). The engine stop plate has elongated holes to allow it to be moved later, and all are required.

4. After the 1.27 mm (0.050 in.) gap has been set, replace the engine from its original position.

5. To avoid damage to the crankshaft (which is fixed), care should be taken not to over-tighten the bolts at the bottom of the power assisted steering pump assembly.
