 between results of similar studies or determine useful directions of research In this book we focus on the use of meta analysis
 in environmental economics and related fields of study The first part of the book covers the overall meta approach
 methodology for social sciences and economics in particular This is followed by technical and non technical discussions of
 statistical and rough set techniques for analysis At appropriate places this is supplemented with reviews of applications in
 environmental economics and related fields In the second part of the book a number of case studies show different aspects of
 the application of meta analysis The research areas considered include among others tourism multipliers air pollution
 valuation risk and value of life pesticide price policy travel time savings and transport externality and policy issues The
 benefits of the appropriate application of meta analysis in environmental economics are a better use of existing information
