The Feeling of Life Itself Christof Koch, 2020-09-08 A thought provoking argument that consciousness more widespread than previously assumed is the feeling of being alive not a type of computation or a clever hack In *The Feeling of Life Itself* Christof Koch offers a straightforward definition of consciousness as any subjective experience from the most mundane to the most exalted the feeling of being alive Psychologists study which cognitive operations underpin a given conscious perception Neuroscientists track the neural correlates of consciousness in the brain the organ of the mind But why the brain and not say the liver How can the brain three pounds of highly excitable matter a piece of furniture in the universe subject to the same laws of physics as any other piece give rise to subjective experience Koch argues that what is needed to answer these questions is a quantitative theory that starts with experience and proceeds to the brain In *The Feeling of Life Itself* Koch outlines such a theory based on integrated information Koch describes how the theory explains many facts about the neurology of consciousness and how it has been used to build a clinically useful consciousness meter The theory predicts that many and perhaps all animals experience the sights and sounds of life consciousness is much more widespread than conventionally assumed Contrary to received wisdom however Koch argues that programmable computers will not have consciousness Even a perfect software model of the brain is not conscious Its simulation is fake consciousness Consciousness is not a special type of computation it is not a clever hack Consciousness is about being
