Safety Report Atlantic Southeast Airline:

Safety Report United States. National Transportation Safety Board, 1999 During the 1980s the National Transportation Safety Board investigated several aviation highway and marine accidents that involved operator fatigue Following completion of these investigations the Safety Board in 1989 issued three recommendations to the U S Department of Transportation DOT addressing needed research education and revisions to hours of service regulations In the 10 years that have passed the Safety Board has issued more than 70 additional recommendations to the DOT States industry and industry associations to reduce the incidence of fatigue related accidents In response to the three 1989 recommendations the DOT and the modal administrations have in general acted and responded positively to those addressing research and education little action however has occurred with respect to revising the hours of service regulations Nevertheless the Safety Board believes that support has grown in recent years to make substantive changes to these regulations This report provides an update on the activities and efforts by the DOT and the modal administrations to address operator fatigue and consequently the progress that has been made in the past 10 years to implement the actions called for in the three intermodal recommendations and other fatigue related recommendations The report also provides some background information on current hours of service regulations fatigue and the effects of fatigue on transportation safety As a result of this safety report the National Transportation Safety Board issued new safety recommendations to the U S Department of Transportation the Federal Aviation Administration the Federal Highway Administration the Federal Railroad Administration the Research and Special Programs Administration and the United States Coast Guard The Safety Board also reiterated two recommendations to the Federal Aviation Administration *Aircraft Accident Report* , *Scientific and Technical Aerospace Reports* , 1993

Evaluation of U.S. Department of Transportation efforts in the 1990s to address operator fatigue , 1999 During the 1980s the National Transportation Safety Board investigated several aviation highway and marine accidents that involved operator fatigue Following completion of these accident investigations the Safety Board in 1989 issued three recommendations to the U S Department of Transportation DOT addressing needed research education and revisions to hours of service regulations Ten years have passed since these safety recommendations were issued In the interim the Safety Board has issued more than 70 additional recommendations to the DOT States industry and industry associations to reduce the incidence of fatigue related accidents In response to the three 1989 recommendations the DOT and the modal administrations have in general acted and responded positively to the recommendations addressing research and education little action however has occurred with respect to revising the hours of service regulations Nevertheless the Safety Board believes that support has grown in recent years to make substantive changes to these regulations This report provides an update on the activities and efforts by the DOT and the modal administrations to address operator fatigue and consequently the progress that has been made in the past 10 years to implement the actions called for in the three intermodal

recommendations and other fatigue related recommendations The report also provides some background information on current hours of service regulations fatigue and the effects of fatigue on transportation safety As a result of this safety report the National Transportation Safety Board issued new safety recommendations to the U S Department of Transportation the Federal Aviation Administration the Federal Highway Administration the Federal Railroad Administration the Research and Special Programs Administration and the United States Coast Guard

Safety Report on the Treatment of Safety-critical Systems in Transport Airplanes ,2006 *Civil and Military Airworthiness* Kyriakos I.

Kourousis,2020-05-27 Airworthiness as a field encompasses the technical and non technical activities required to design certify produce maintain and safely operate an aircraft throughout its lifespan The evolving technology science and engineering methods and most importantly aviation regulation offer new opportunities and create new challenges for the aviation industry This book assembles review and research articles across a variety of topics in the field of airworthiness aircraft maintenance safety management human factors cost analysis structures risk assessment unmanned aerial vehicles and regulations This selection of papers informs the industry practitioners and researchers on important issues

Flight Failure Donald J. Porter,2020-05-19 A former aircraft engineer exposes the dangerous breakdown in airline safety due to lapses in maintenance and quality control This book chronicles maintenance related accidents including the recent Boeing 737 MAX accidents caused by individual corporate or governmental negligence and brings the industry s current state of affairs into sharp focus The author a former aviation engineer specializing in aircraft fault diagnosis and maintenance planning examines how failures of the smallest of parts have brought down airliners explaining sometimes esoteric mechanical issues for readers with no technical background Vividly describing the terror of accidents and close calls the author then follows the painstaking investigations to determine causes He focuses on maintenance errors which rank as one of the top three causes of airline accidents and points to the factors that have led to an alarming situation continued reduction of licensed mechanics the shutting down of maintenance bases in the United States and the outsourcing of maintenance to lowballing contractors Outsourcing has forced thousands of licensed mechanics into retirement or different careers For those mechanics still employed in the United States the ever present threat to their jobs does nothing to cultivate loyalty to an employer and devotion to a task The Federal Aviation Administration which should be overseeing quality control is caught in a conflicted dual role charged with regulating safety on the one hand and assuring the fiscal stability of airlines on the other This disturbing wakeup call for improved airline safety standards highlights the critical importance of attention to detail Porter recommends that the numbers and job security of airline mechanics be increased and that they be vested with an authority level akin to medical professionals
