proposes that during perceptually guided spontaneous activity a variety of biodynamic devices for doing different kinds of work are assembled and adapted to specific tasks Throughout the theory is examined in the context of development and extended to atypical development and other domains such as cognition and language The author also addresses many long standing issues in behavioral development including the apparent disappearance of so called primitive behaviors the emergence of new skills and the role of the caregiver in skill acquisition The author concludes his work by discussing how the implications of this research can be applied to understanding abnormal development in children who are motor impaired Interdisciplinary in scope and accessible to a broad range of readers Emergent Forms will fascinate students and researchers of ecological developmental evolutionary and cognitive psychology

Principles of Sonar Performance Modelling

Michael Ainslie, 2010-09-14 Sonar performance modelling SPM is concerned with the prediction of quantitative measures of sonar performance such as probability of detection It is a multi disciplinary subject requiring knowledge and expertise in the disparate fields of underwater acoustics acoustical oceanography sonar signal processing and statistical detection theory No books have been published on this subject however since the 3rd edition of Urick s classic work 25 years ago and so Dr Ainslie s book will fill a much needed gap in the market Currently up to date information can only be found in different forms and often with conflicting information in various journals conference and textbook publications Dr Michael Ainslie is eminently qualified to write this unique book He has worked on sonar performance modeling problems since 1983 He has written many peer reviewed research articles and conference papers related to sonar performance modeling making contributions in the fields of sound propagation and detection theory
