Dahl,2005 **Current Catalog** National Library of Medicine (U.S.),1992 **Bulk Crystal Growth** D. T. J. Hurle,2016-06-06 Volume 2 is divided into 2 parts Part A reviews the principal techniques used for bulk single crystal growth from melt solution and vapour and for industrial mass crystallisation starting in chapter 1 with nature s techniques The growth of synthetic crystals of a wide range of materials for research and commercial use is covered in depth with emphasis placed on those techniques which are of current importance techniques of only historical interest have not been included Part B covers the basic mechanisms and dynamics of melt and solution growth covering segregation melt convection stress in the cooling crystal polyphase solidification growth in gels spherulitic crystallisation and the numerical modelling of Bridgman and Czochralski growth processes **Parallelism and Programming in Classifier Systems** Stephanie Forrest,2014-06-28 Parallelism and Programming in Classifier Systems deals with the computational properties of the underlying parallel machine including computational completeness programming and representation techniques and efficiency of algorithms In particular efficient classifier system implementations of symbolic data structures and reasoning procedures are presented and analyzed in detail The book shows how classifier systems can be used to implement a set of useful operations for the classification of knowledge in semantic networks A subset of the KL ONE language was chosen to demonstrate these operations Specifically the system performs the following tasks 1 given the KL ONE description of a particular semantic network the system produces a set of production rules classifiers that represent the network and 2 given the description of a new term the system determines the proper location of the new term in the existing network These two parts of the system are described in detail The implementation reveals certain computational properties of classifier systems including completeness operations that are particularly natural and efficient and those that are quite awkward The book

shows how high level symbolic structures can be built up from classifier systems and it demonstrates that the parallelism of classifier systems can be exploited to implement them efficiently This is significant since classifier systems must construct large sophisticated models and reason about them if they are to be truly intelligent Parallel organizations are of interest to many areas of computer science such as hardware specification programming language design configuration of networks of separate machines and artificial intelligence This book concentrates on a particular type of parallel organization and a particular problem in the area of AI but the principles that are elucidated are applicable in the wider setting of computer science
