Transducers and Arrays for Underwater Sound Charles Sherman, John Butler,2007-01-05 The efficacy of sound to penetrate the seas made acoustic systems in the past century the leading tools for sensing objects in and measuring properties of the seas For over sixty years The United States Office of Naval Research ONR has been a major sponsor of undersea research and development at universities national laboratories and industrial organizations Appropriately ONR is the sponsor of this monograph series The intent of the series is to summarize recent accomplishments in and to outline perspectives for underwater acoustics in specific fields of research The general field has escalated in importance and spread broadly with richness and depth of understanding It

has also quite naturally become more specialized The goal of this series is to present monographs that critically review both past and recent accomplishments in order to address the shortcomings in present und standing In this way these works will bridge the gaps in understanding among the specialists and favorably color the direction of new research and development Each monograph is intended to be a stand alone advanced contribution to the eld We trust that the reader will also nd that each is a critical introduction to related specialized topics of interest as well
