Bilham,2005-11-24 Earthquakes rank among the most terrifying natural disasters faced by mankind Out of a clear blue sky or worse a jet black one comes shaking strong enough to hurl furniture across the room human bodies out of bed and entire houses off of their foundations When the dust settles the immediate aftermath of an earthquake in an urbanized society can be profound Phone and water supplies can be disrupted for days fires erupt and even a small number of overpass collapses can snarl traffic for months However when one examines the collective responses of developed societies to major earthquake disasters in recent historic times a somewhat surprising theme emerges not only determination but resilience not only resilience but acceptance not only acceptance but astonishingly humor Elastic rebound is one of the most basic tenets of modern earthquake science the term that scientists use to describe the build up and release of energy along faults It is also the best metaphor for societal responses to major earthquakes in recent historic times After The Earth Quakes focuses on this theme using a number of pivotal and intriguing historic earthquakes as illustration The book concludes with a consideration of projected future losses on an increasingly urbanized planet including the near certainty that a future earthquake will someday claim over a million lives This grim prediction impels us to take steps to mitigate earthquake risk the innately human capacity for rebound notwithstanding *The Planetary Report* ,1995 *High Lean Country* Iain Davidson,Andrew Piper,JS Ryan,2020-07-22

High Lean Country captures the rich history and haunting character of the New England region of northern New South Wales. The authors explore how memory of land of family of patterns of life on the other side of the world has influenced the identity of New England. They also consider how the high country itself has shaped its people and their sense of regional uniqueness. In doing so this book sets a new direction for understanding Australia as a whole. Weaving together the histories of human settlement economic social and cultural development as well as interactions with the environment High Lean Country shows how colonial settlers strived for decades to literally create a new England. It traces the story of the graduates of Oxford and Cambridge who turned their hands to sheep husbandry and developed a squattocracy the establishment of schools and other institutions and the cultivation of traditional arts. It also examines the early colonial bushranging period and a history of not always friendly relations between white settlers and the local Aboriginal population. A project of the Heritage Futures Research Centre at the University of New England High Lean Country is a fascinating study of this distinctive Australian high country.

The Journey of Man Spencer Wells, 2017-03-28 Around 60 000 years ago a man genetically identical to us lived in Africa. Every person alive today is descended from him. How did this real life Adam wind up as the father of us all? What happened to the descendants of other men who lived at the same time? And why if modern humans share a single prehistoric ancestor do we come in so many sizes shapes and races? Examining the hidden secrets of human evolution in our genetic code the author reveals how developments in the revolutionary science of population genetics have made it possible to create a family tree for the whole of humanity. Replete with marvelous anecdotes and remarkable information from the truth about the real Adam and Eve to the way differing racial types emerged this book is an enthralling epic tour through the history and development of early humankind.
