Chaos in Brain Function Erol Başar, 2012-12-06 The analysis of deterministic chaos is currently an active field in many branches of research Mathematically all nonlinear dynamical systems with more than two degrees of freedom can generate chaos becoming unpredictable over a longer time scale The brain is a nonlinear system par excellence Accordingly the concepts of chaotic dynamics have found in the last five years an important application in research on compound electrical activity of the brain The present volume seeks to cover most of the relevant studies in the newly emerging field of chaotic attractors in the brain This volume is essentially a selection and reorganization of contributions from the first two

volumes in the Springer Series in Brain Dynamics which were based on conferences held in 1985 and 1987 in Berlin It also includes a survey of progress in the recording of evoked oscillations of the brain both at the cellular and EEG levels and an agenda for research on chaotic dynamics Although the first publications pointing out evidence of chaotic behavior of the EEG did not appear until the beginning of 1985 the presence of the pioneering scientists in this field gave the participants at the first conference volume 1 a strong impulse toward this field For me as conference organizer having been for a long time active in nonlinear EEG research the integration of this topic was self evident however the enthusiasm of the conference participants was greater than expected *Mathematics Teacher, Learning and Teaching PK-12*, 1919 Math Shortcuts
