The Voice Catchers Joseph Turow,2021-05-18 Your voice as biometric data and how marketers are using it to manipulate you Only three decades ago it was inconceivable that virtually entire populations would be carrying around wireless phones wherever they went or that peoples exact locations could be tracked by those devices We now take both for granted Even just a decade ago the idea that individuals voices could be used to identify and draw inferences about them as they shopped or interacted with retailers seemed like something out of a science fiction novel Yet a new business sector is emerging to do exactly that The first in depth examination of the voice intelligence industry The Voice Catchers exposes how artificial intelligence is enabling personalized marketing and discrimination through voice analysis Amazon and Google have numerous patents pertaining to voice profiling and even now their smart speakers are extracting and using voice prints for identification and more Customer service centers are already approaching every caller based on what they conclude a caller s voice reveals about that person s emotions sentiments and personality often in real time In fact many scientists believe that a person s weight height age and race not to mention any illnesses they may have can also be identified from the sound of that individual s voice Ultimately not only marketers but also politicians and governments may use voice profiling to infer personal characteristics for selfish interests and not for the benefit of a citizen or of society as a whole Leading communications scholar Joseph Turow places the voice intelligence industry in historical perspective explores its contemporary developments and offers a clarion call for regulating this rising surveillance regime
