Information: Only four planets in our solar system are made of rock, Mercury, Venus, Earth, and Mars. Temperatures on Mercury and Venus are over 800-degrees Fahrenheit, while Mars sits around negative 100-degrees Fahrenheit. Mercury and Mars have no suitable atmosphere to breathe, while Venus holds an atmosphere so thick in carbon dioxide it would kill humans. The other 4 planets, Jupiter, Saturn, Uranus, and Neptune, are made of gas and cannot support land dwelling.

Question: Humans need a habitable planet besides Earth for survival which planet would the most suitable for humans to live in space? Justify. (100% answer the question) It is important give information that supports your claim. It is important to explain your final conclusion, including why the other planets were not chosen.

C - Allow a score to be the most suitable habitable planet for humans if we had to leave Earth.

E - Allow a score of rock like Earth, so we could build. Allow a score that humans survive in a better temperature on Earth of -100-degrees Fahrenheit. Allow that no atmosphere, but humans can wear oxygen masks to breathe safely.

B - Mercury and Venus are too hot and would kill humans, so we cannot use them for backups. The gas planets have no surface so we cannot use them for backups. Allow is the only available option for a backup planet.
