S.N. Sen

Ple Platoweb Modern World History:

The Structure of World History Kojin Karatani, 2014-03-28 In this major paradigm shifting work Kojin Karatani systematically re reads Marx's version of world history shifting the focus of critique from modes of production to modes of exchange Karatani seeks to understand both Capital Nation State the interlocking system that is the dominant form of modern global society and the possibilities for superseding it In *The Structure of World History* he traces different modes of exchange including the pooling of resources that characterizes nomadic tribes the gift exchange systems developed after the adoption of fixed settlement agriculture the exchange of obedience for protection that arises with the emergence of the state the commodity exchanges that characterize capitalism and finally a future mode of exchange based on the return of gift exchange albeit modified for the contemporary moment He argues that this final stage marking the overcoming of capital nation and state is best understood in light of Kant's writings on eternal peace *The Structure of World History* is in many ways the capstone of Karatani's brilliant career yet it also signals new directions in his thought

Contemporary World History William J. Duiker, 2010

The Origins of the Modern World Robert B. Marks, 2024-01-02 This clearly written and engrossing book presents a global narrative of the origins of the modern world from 1400 to the present Unlike most studies which assume that the rise of the West is the story of the coming of the modern world this history drawing upon new scholarship on Asia Africa and the New World and upon the maturing field of environmental history constructs a story in which those parts of the world play major roles including their impacts on the environment Robert B Marks defines the modern world as one marked by industry the nation state interstate warfare a large and growing gap between the wealthiest and poorest parts of the world increasing inequality within the wealthiest industrialized countries and an escape from the environmental constraints of the biological old regime He explains its origins by emphasizing contingencies such as the conquest of the New World the broad comparability of the most advanced regions in China India and Europe the reasons why England was able to escape from common ecological constraints facing all of those regions by the end of the eighteenth century a conjuncture of human and natural forces that solidified a gap between the industrialized and non industrialized parts of the world the mounting environmental crisis that defines the modern world and the ways in which the forces of globalization stress the economic and political underpinnings of the modern world Now in a new edition that brings the saga of the modern world to the present in an environmental context the book considers how and why the United States emerged as a world power in the twentieth century and became the sole superpower by the twenty first century and why the changed relationship of humans to the environment likely will be the hallmark of the modern era the Anthropocene Once again arguing that the US rise to global hegemon was contingent not inevitable Marks also points to the resurgence of Asia and the vastly changed relationship of humans to the environment that may in the long run overshadow any political and economic milestones of the past hundred years
