proposes that during perceptually guided spontaneous activity a variety of biodynamic devices for doing different kinds of work are assembled and adapted to specific tasks Throughout the theory is examined in the context of development and extended to atypical development and other domains such as cognition and language The author also addresses many long standing issues in behavioral development including the apparent disappearance of so called primitive behaviors the emergence of new skills and the role of the caregiver in skill acquisition The author concludes his work by discussing how the implications of this research can be applied to understanding abnormal development in children who are motor impaired Interdisciplinary in scope and accessible to a broad range of readers Emergent Forms will fascinate students and researchers of ecological developmental evolutionary and cognitive psychology
