Handbook of Research on Network-Enabled IoT Applications for Smart City Services Reddy, K. Hemant Kumar, Roy, Diptendu Sinha, Mishra, Tapas Kumar, Hussain, Mir Wajahat, 2023-09-26 The rapid growth of IoT and its applications in smart cities pose significant challenges for academic scholars. The increasing number of interconnected devices and the massive amounts of data they generate strain traditional networks, leading to inefficiencies and security vulnerabilities. Additionally, the centralized control plane in Software Defined Networks (SDN) presents a single point of failure, hindering network performance, while IoT devices themselves are susceptible to attacks compromising user data and privacy. To address these pressing issues, *Network Enabled IoT Applications for Smart City Services* offers a compelling solution. Edited by Dr. K. Hemant Kumar Reddy, Dr. Diptendu Sinha Roy, and Tapas Mishra, this book advocates leveraging SDN to handle high-frequency data streams effectively. It also proposes the integration of blockchain technology to enhance security and reliability in IoT applications, offering a roadmap for scholars to improve network efficiency, security, and reliability in IoT and smart city domains. With their extensive expertise, the authors provide academic scholars with a comprehensive and innovative resource that inspires further research and development in this evolving field, enabling them to make significant contributions to the advancement of IoT and smart city technologies.

A Study of Black Hole Attack Solutions Iraj Sadegh Amiri,Elahe Fazeldehkordi,Oluwatobi Ayodeji Akanbi,2015-11-03 Mobile Ad Hoc Networks MANETs are a popular form of network for data transfer due to the fact that they are dynamic require no fixed infrastructure and are scalable However MANETs are particularly susceptible to several different types of widely perpetrated cyberattack One of the most common hacks aimed at MANETs is the Black Hole attack in which a particular node within the network displays itself as having the shortest path for the node whose packets it wants to intercept Once the packets are drawn to the Black Hole they are then dropped instead of relayed and the communication

of the MANET is thereby disrupted without knowledge of the other nodes in the network Due to the sophistication of the Black Hole attack there has been a lot of research conducted on how to detect it and prevent it The authors of this short format title provide their research results on providing an effective solution to Black Hole attacks including introduction of new MANET routing protocols that can be implemented in order to improve detection accuracy and network parameters such as total dropped packets end to end delay packet delivery ratio and routing request overhead Elaborates on the basics of wireless networks MANETs Explains the significance behind the need of wireless networks and MANET security Understand MANET routing protocols namely the ADOV method
